One storm,
three structures.

Which of the three FMCG producers best controls its operating profit — and stays standing when the currency and interest rates turn?

		Revenue	
Edita	EFID	20.9 EGP bn	The controlled operator
Juhayna	JUFO	30.0 EGP bn	The stretched giant
Domty	DOMT	9.4 EGP bn	The pressured turnaround

Ahmed Moustafa · Operating & resilience deep-dive

THE FIELD

Three companies, three different answers

The same macro shock hit all three — structure decided who absorbed it.

Edita

E F I D

The controlled operator

Smaller sales, biggest profit. Wins on price not volume, balanced on the dollar, carries a light balance sheet.

12.9%	7.1×	0.70×
NET MARGIN	INT. COVER	ND / EQ.

Juhayna

J U F O

The stretched giant

Biggest sales, thinnest margin. A dollar-heavy cost base and a debt-funded build narrowed the cushion.

6.4%	3.1×	1.16×
NET MARGIN	INT. COVER	ND / EQ.

Domty

D O M T

The pressured turnaround

Smallest, highest financing stress. No direct FX, but 100% floating debt met a rate shock mid-restructuring.

1.7%	1.46×	1.17×
NET MARGIN	INT. COVER	ND / EQ.

– Edita controls profit and the balance sheet; Juhayna leads on scale but not on the quality of that profit; Domty is a bet, not yet a verdict.

HOW TO READ THIS

Seven lenses, one verdict

The same three companies, read from the top line down to the share price.

01	**Revenue & growth** Who sells what — and how fast it is still growing	*The top line*
02	**Costs & margins** What survives as profit, from gross down to net	*What survives*
03	**The dollar & EAS 13** The currency force behind the margin split	*The hidden force*
04	**Balance sheet & debt** How heavy each structure is — and what it costs	*The structure*
05	**Returns & quality** What they earn on capital, and how honestly	*The payoff*
06	**Valuation** What the market asks you to pay for each	*The price*
07	**The verdict** Who controls profit and stays standing under stress	*The decision*

01

Revenue & growth

Who sells what — and how fast it is still growing.

> *We start at the top line — the scale each business plays at, before a single cost.*

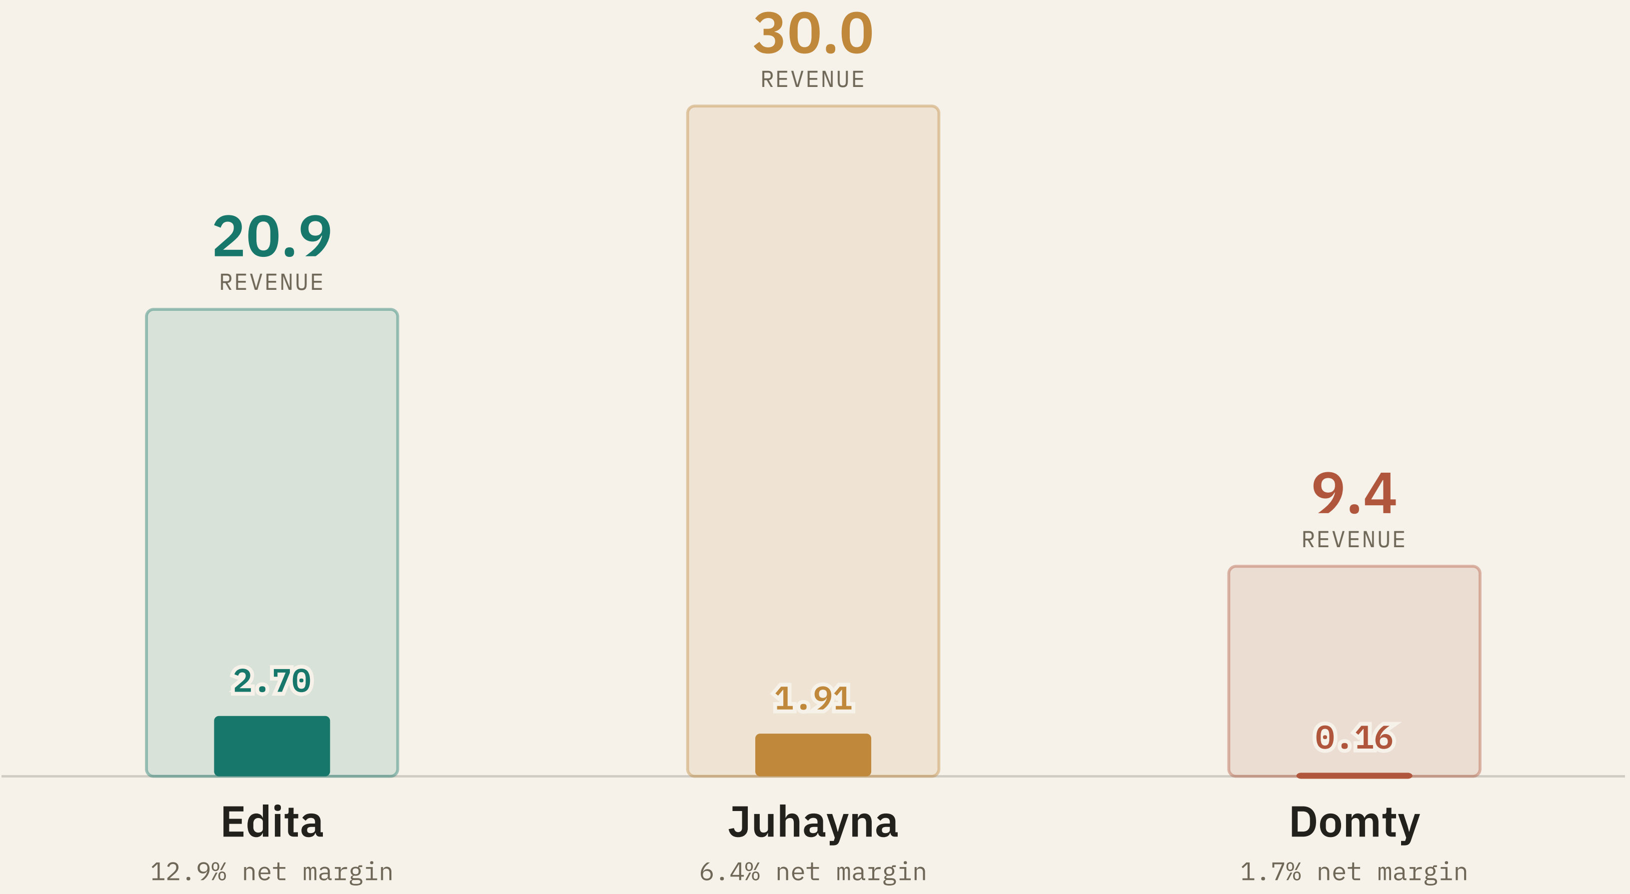
01 Sales vs profit — the central paradox
02 Revenue scale & five-year trajectory
03 Annual growth, year by year
04 Inside Juhayna: revenue by segment

EXHIBIT 01 · SALES VS PROFIT

The biggest seller is not the biggest earner

FY2025 · revenue (ghost) vs net profit (solid) · EGP bn

Revenue Net profit



12.9%

Edita net margin — the most of every pound kept

6.4%

Juhayna net margin — half as much on bigger sales

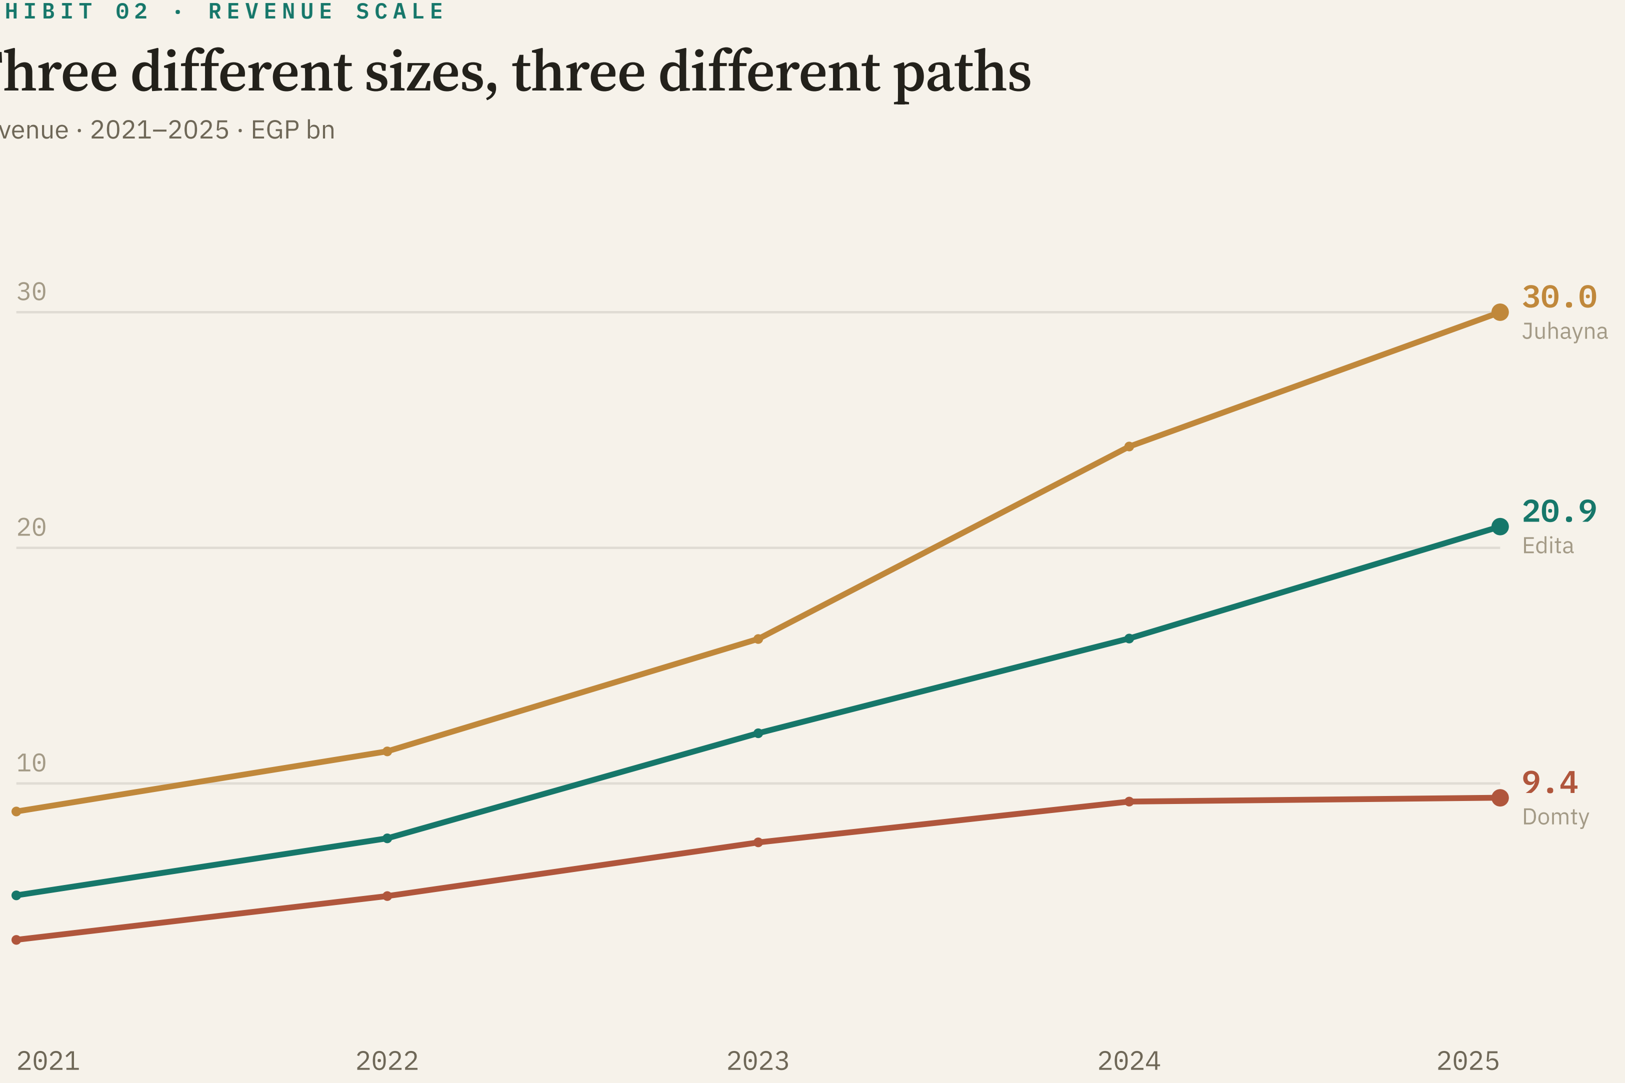
Juhayna profit shown reported; 1.56 on an FX-adjusted basis.

– Juhayna sells about 44% more than Edita, yet Edita earns about 41% more profit — pricing power beats volume.

EXHIBIT 02 · REVENUE SCALE

Three different sizes, three different paths

Revenue · 2021–2025 · EGP bn



30.0

Juhayna 2025 revenue — the scale leader, EGP bn

3.98×

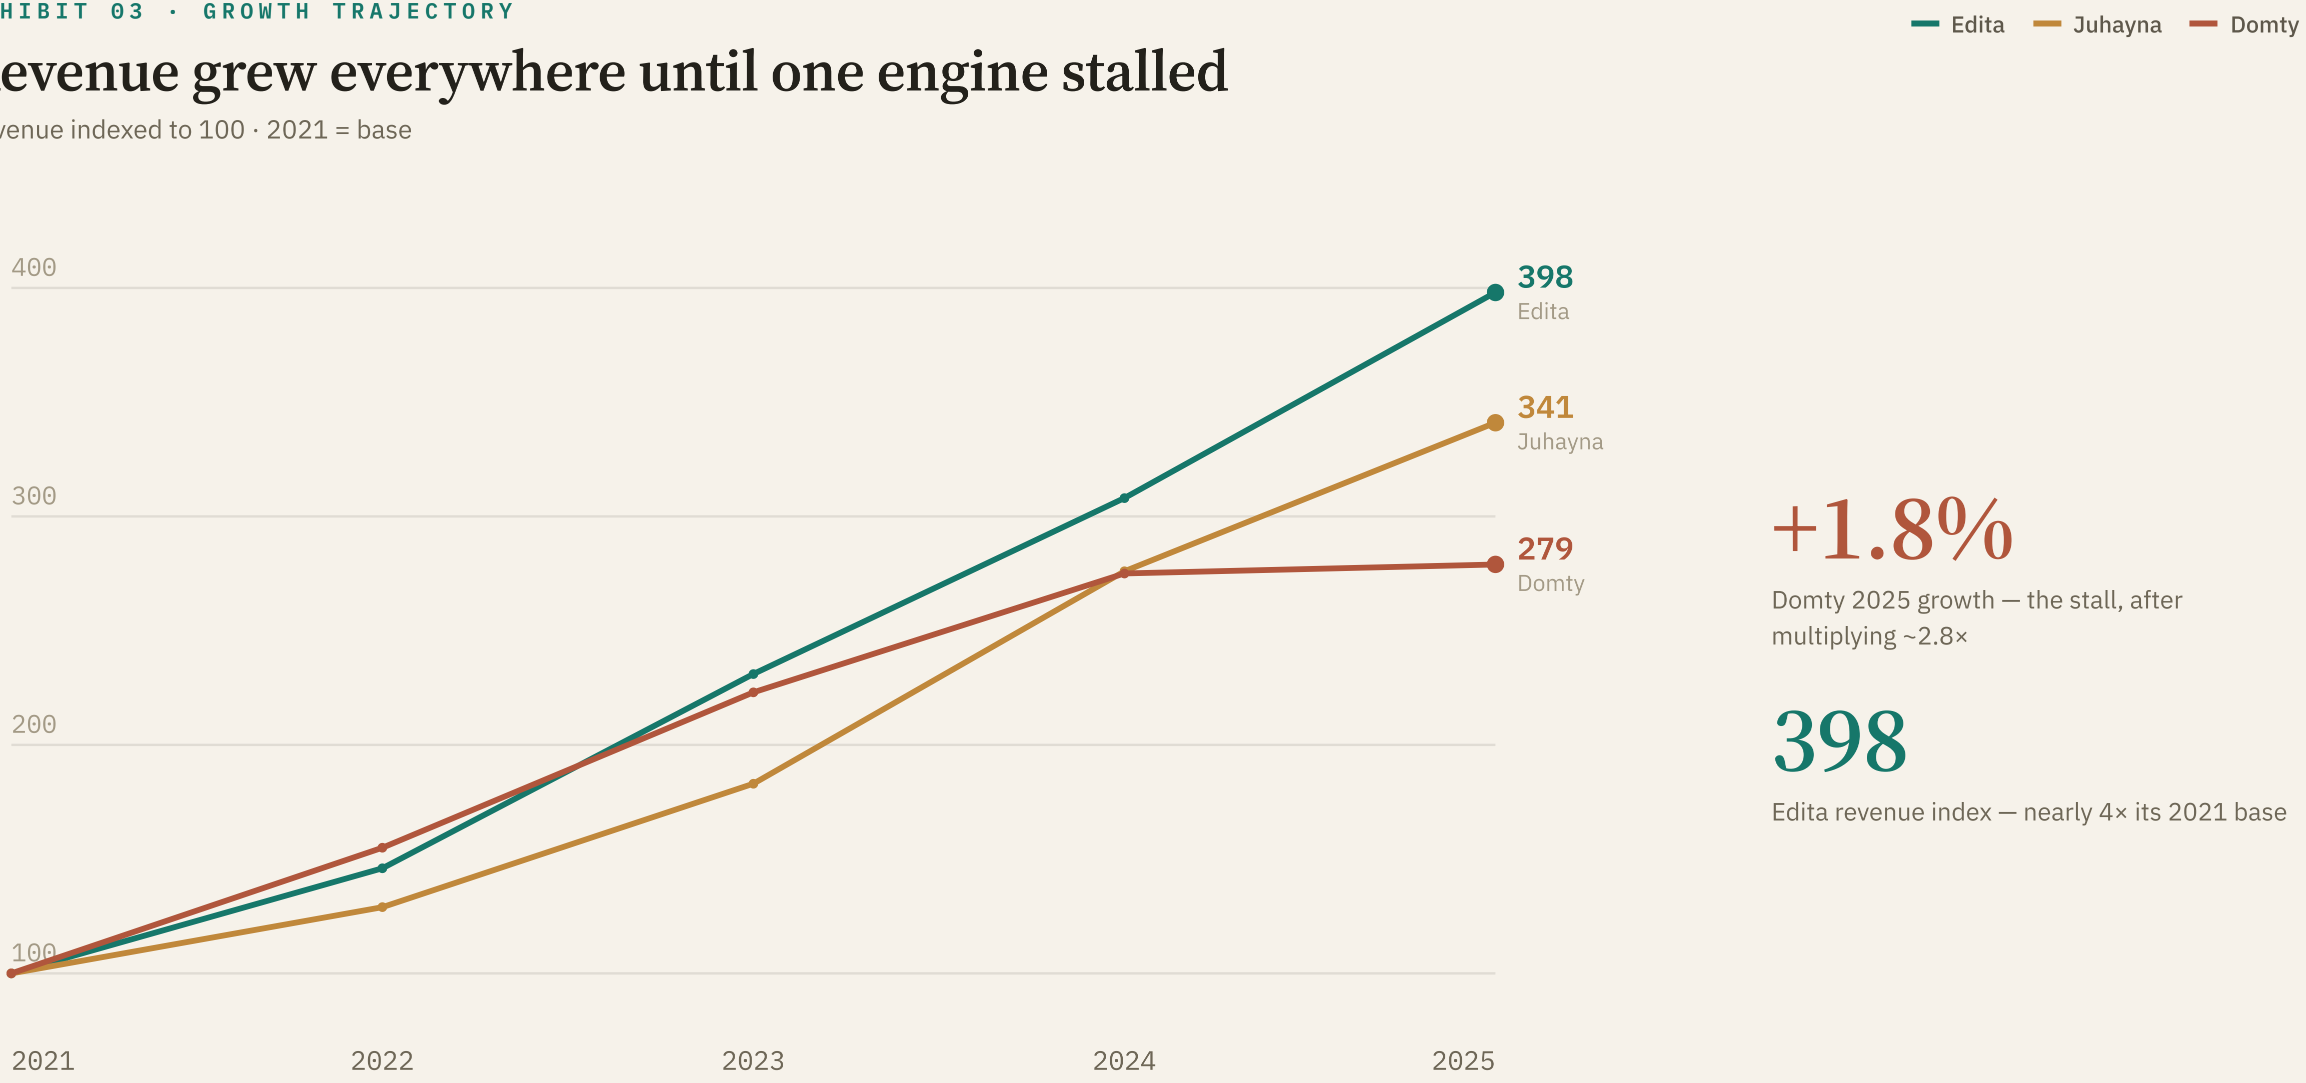
Edita revenue growth since 2021 — doubled past Domty

— Juhayna is the scale leader near 30bn; Edita doubled past Domty since 2021, while Domty's curve has flattened.

EXHIBIT 03 · GROWTH TRAJECTORY

Revenue grew everywhere until one engine stalled

Revenue indexed to 100 · 2021 = base



+1.8%

Domty 2025 growth — the stall, after multiplying ~2.8×

398

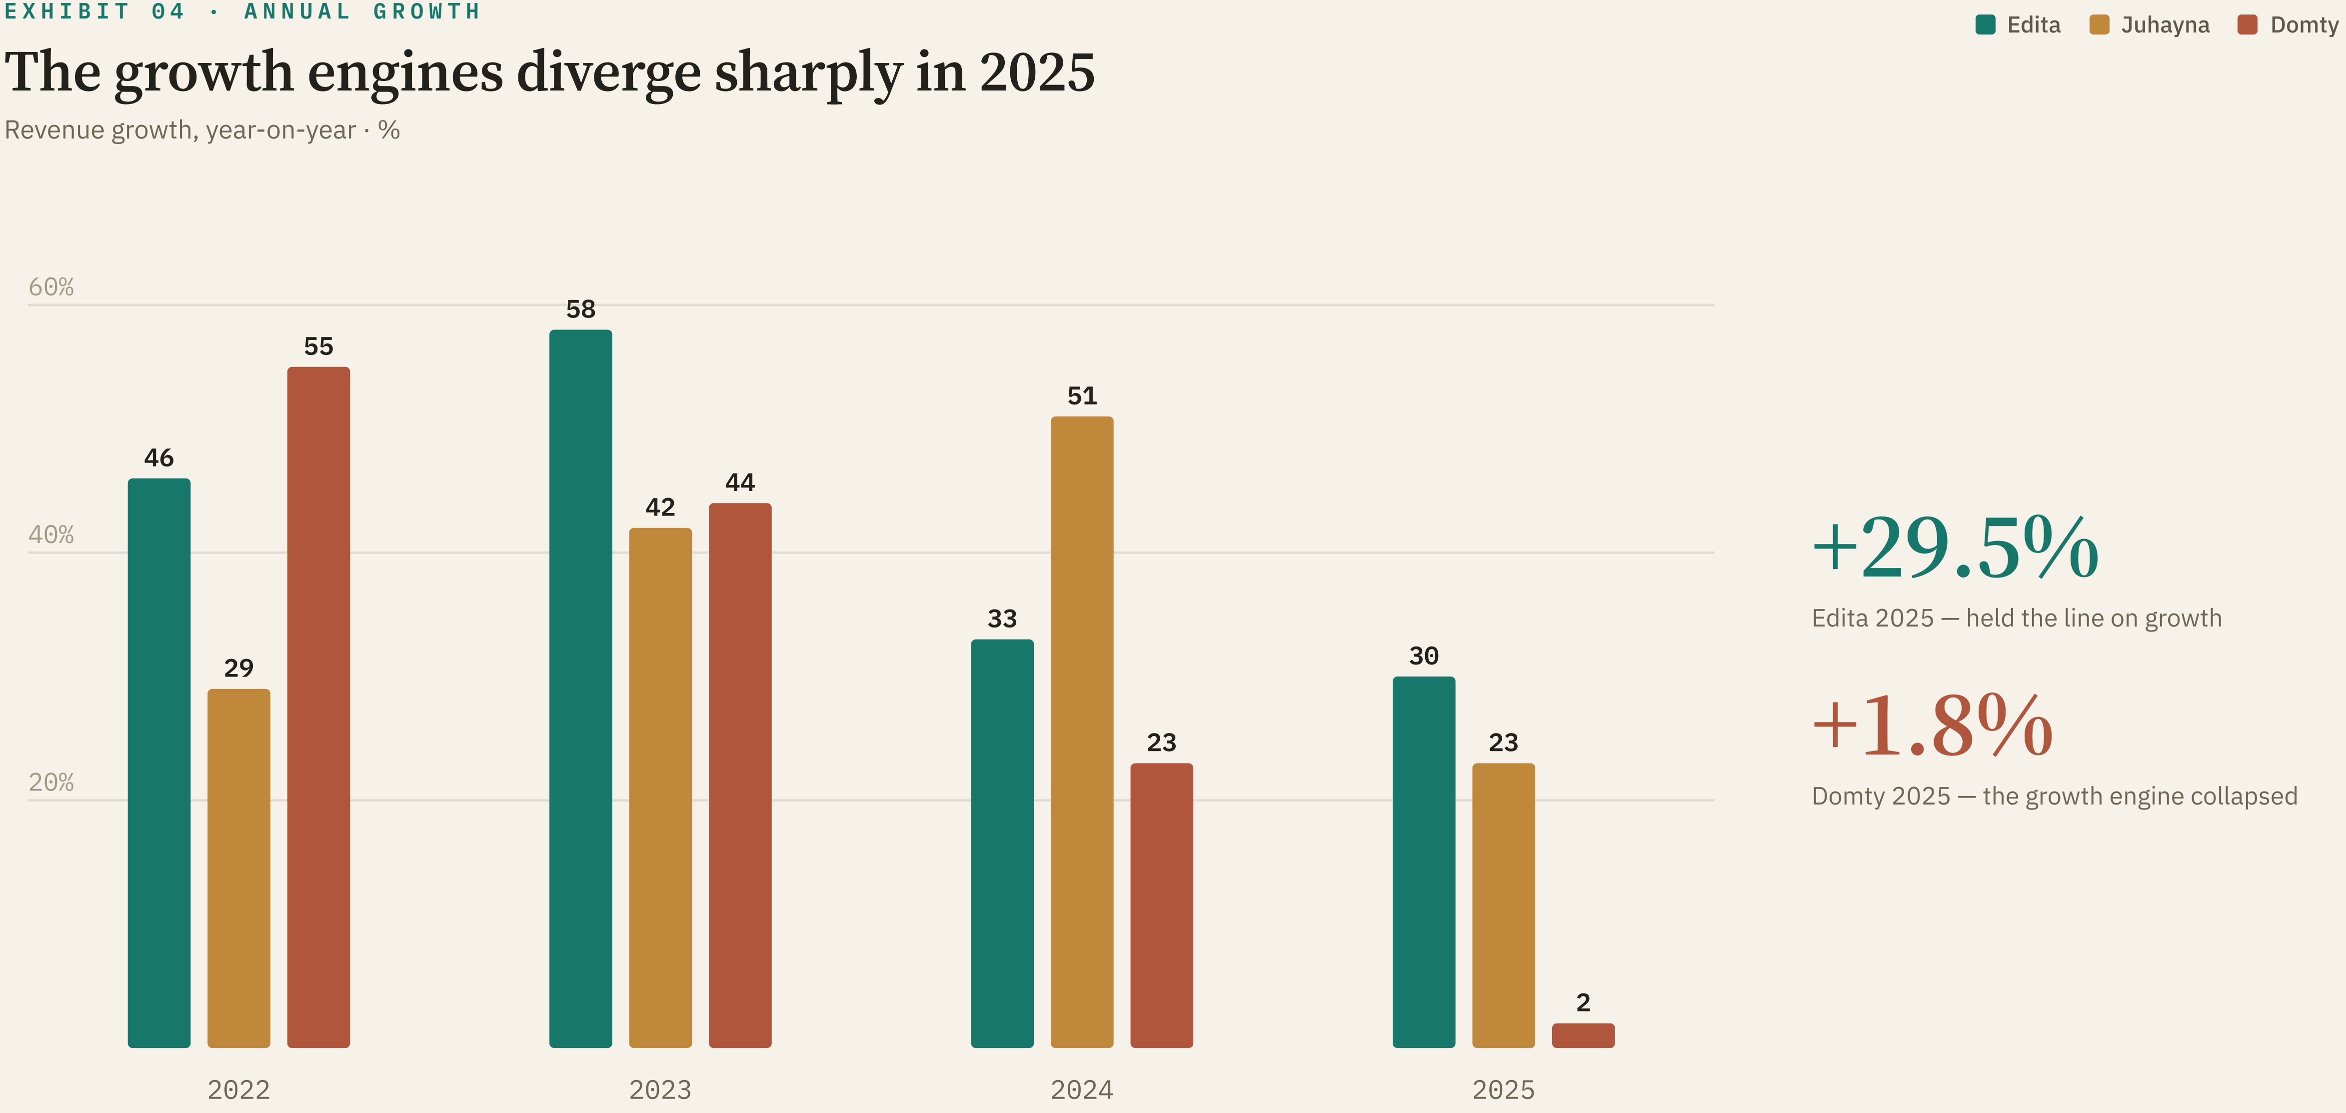
Edita revenue index — nearly 4× its 2021 base

— All three multiplied revenue on inflation-era pricing — then Domty stalled at +1.8% in 2025 as its restructuring bit.

EXHIBIT 04 · ANNUAL GROWTH

The growth engines diverge sharply in 2025

Revenue growth, year-on-year · %



+29.5%

Edita 2025 — held the line on growth

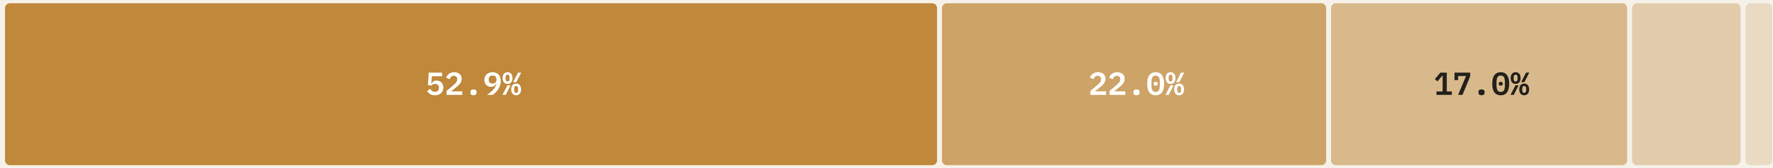
+1.8%

Domty 2025 — the growth engine collapsed

— Through 2024 all three grew double-digit on inflation pricing; in 2025 Edita held about 30% while Domty collapsed to about 2%.

Inside the giant: dairy carries half of Juhayna

Juhayna revenue by segment · share of total · EGP mn · **FY2023 (latest published breakdown)**



Dairy	8,528 mn	52.9%
Chilled / yoghurt	3,541 mn	22.0%
Juice	2,740 mn	17.0%
Concentrates	1,032 mn	6.4%
3rd-party distribution	287 mn	1.8%

16,128

mn total revenue · FY2023 base for the mix

52.9%

Dairy share — its value brand sits under consumer pressure

– Dairy is about 53% of revenue and its value brand sits under consumer pressure; juice and concentrates are the faster, export-tilted lines.

02

Costs & margins

From the top line down to what is actually kept.

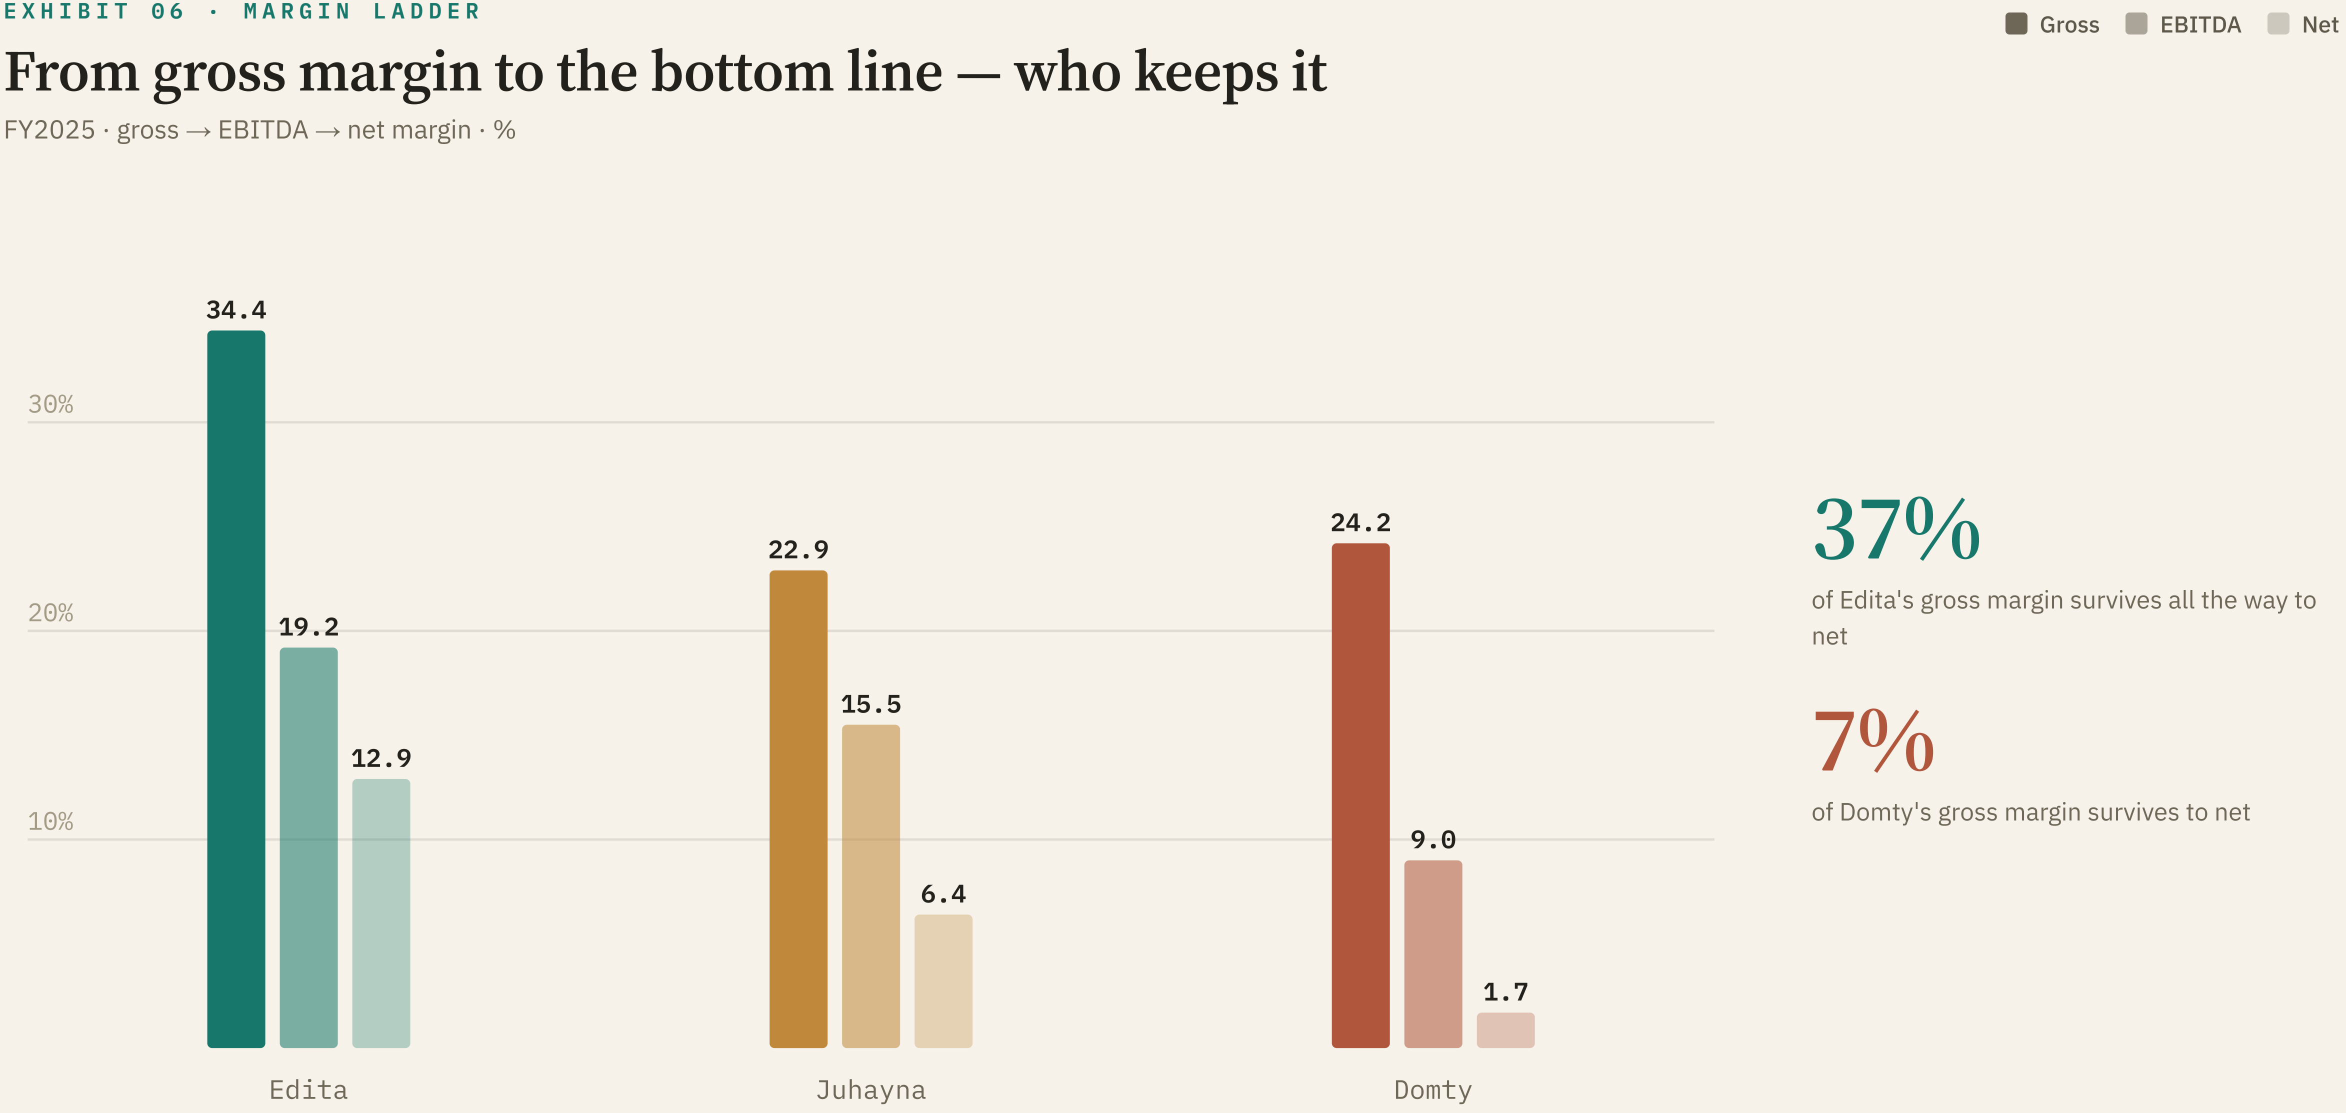
> *Revenue set the scale. Now follow it down to the profit that actually survives.*

06 Margin ladder — gross to net
07 Gross margin over time
08 Operating margin over time
09 Net margin over time
10 Cost anatomy: where money goes
11 The bridge that broke Domty

EXHIBIT 06 · MARGIN LADDER

From gross margin to the bottom line — who keeps it

FY2025 · gross → EBITDA → net margin · %



37%

of Edita's gross margin survives all the way to net

7%

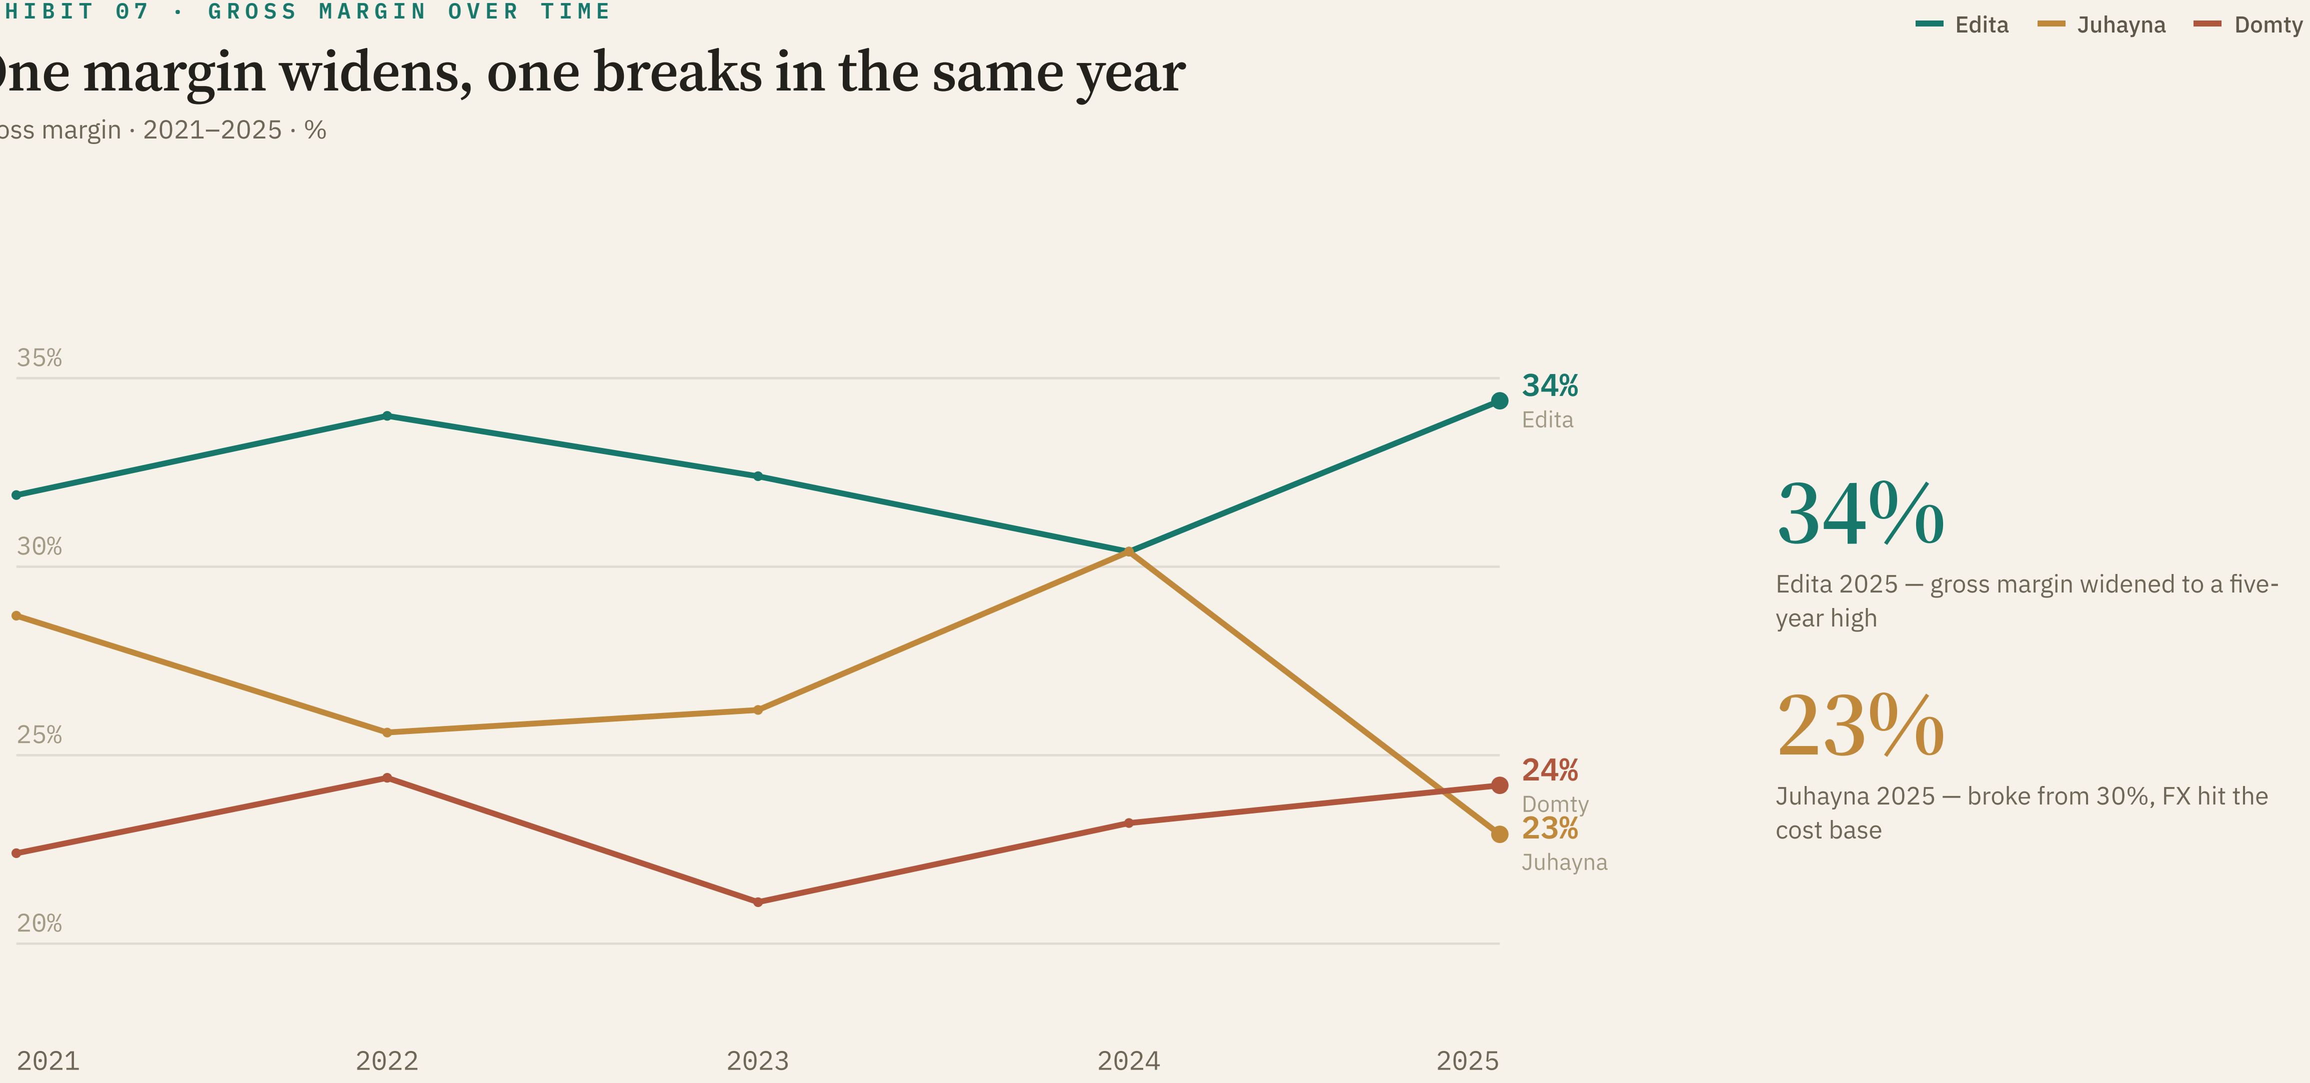
of Domty's gross margin survives to net

— Edita keeps the most of its gross margin; Domty earns a fair gross margin but loses nearly all of it below the line.

EXHIBIT 07 · GROSS MARGIN OVER TIME

One margin widens, one breaks in the same year

Gross margin · 2021–2025 · %



34%

Edita 2025 — gross margin widened to a five-year high

23%

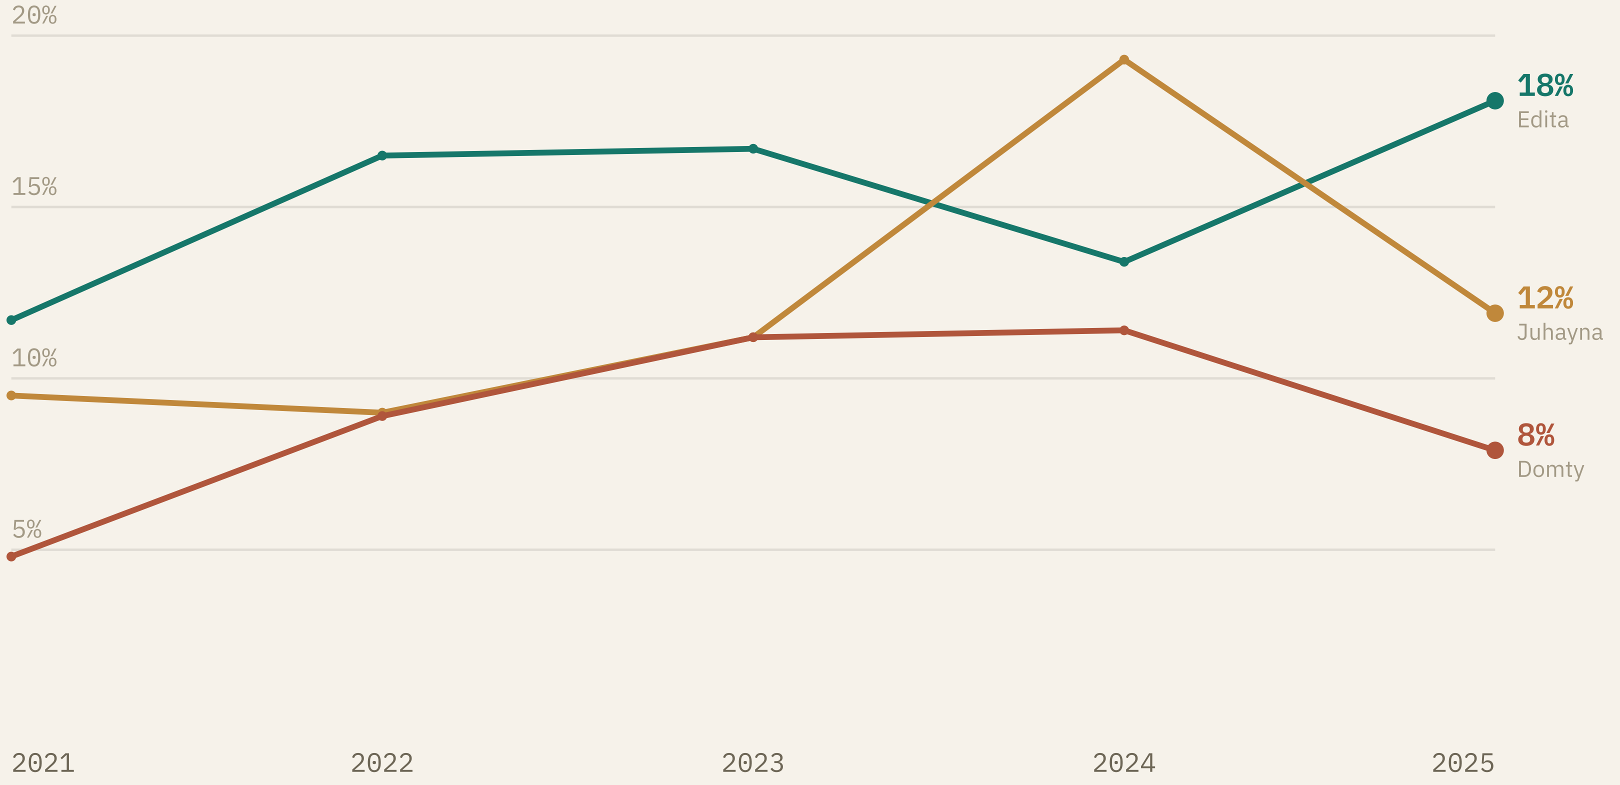
Juhayna 2025 — broke from 30%, FX hit the cost base

— Edita's margin widened to 34% in 2025 while Juhayna's broke from 30% to 23% — the dollar passed straight to the cost base.

EXHIBIT 08 · OPERATING MARGIN OVER TIME

Where the operating engine actually runs

Operating (EBIT) margin · 2021–2025 · %



18%

Edita 2025 — the strongest engine, recovered from 2024

8%

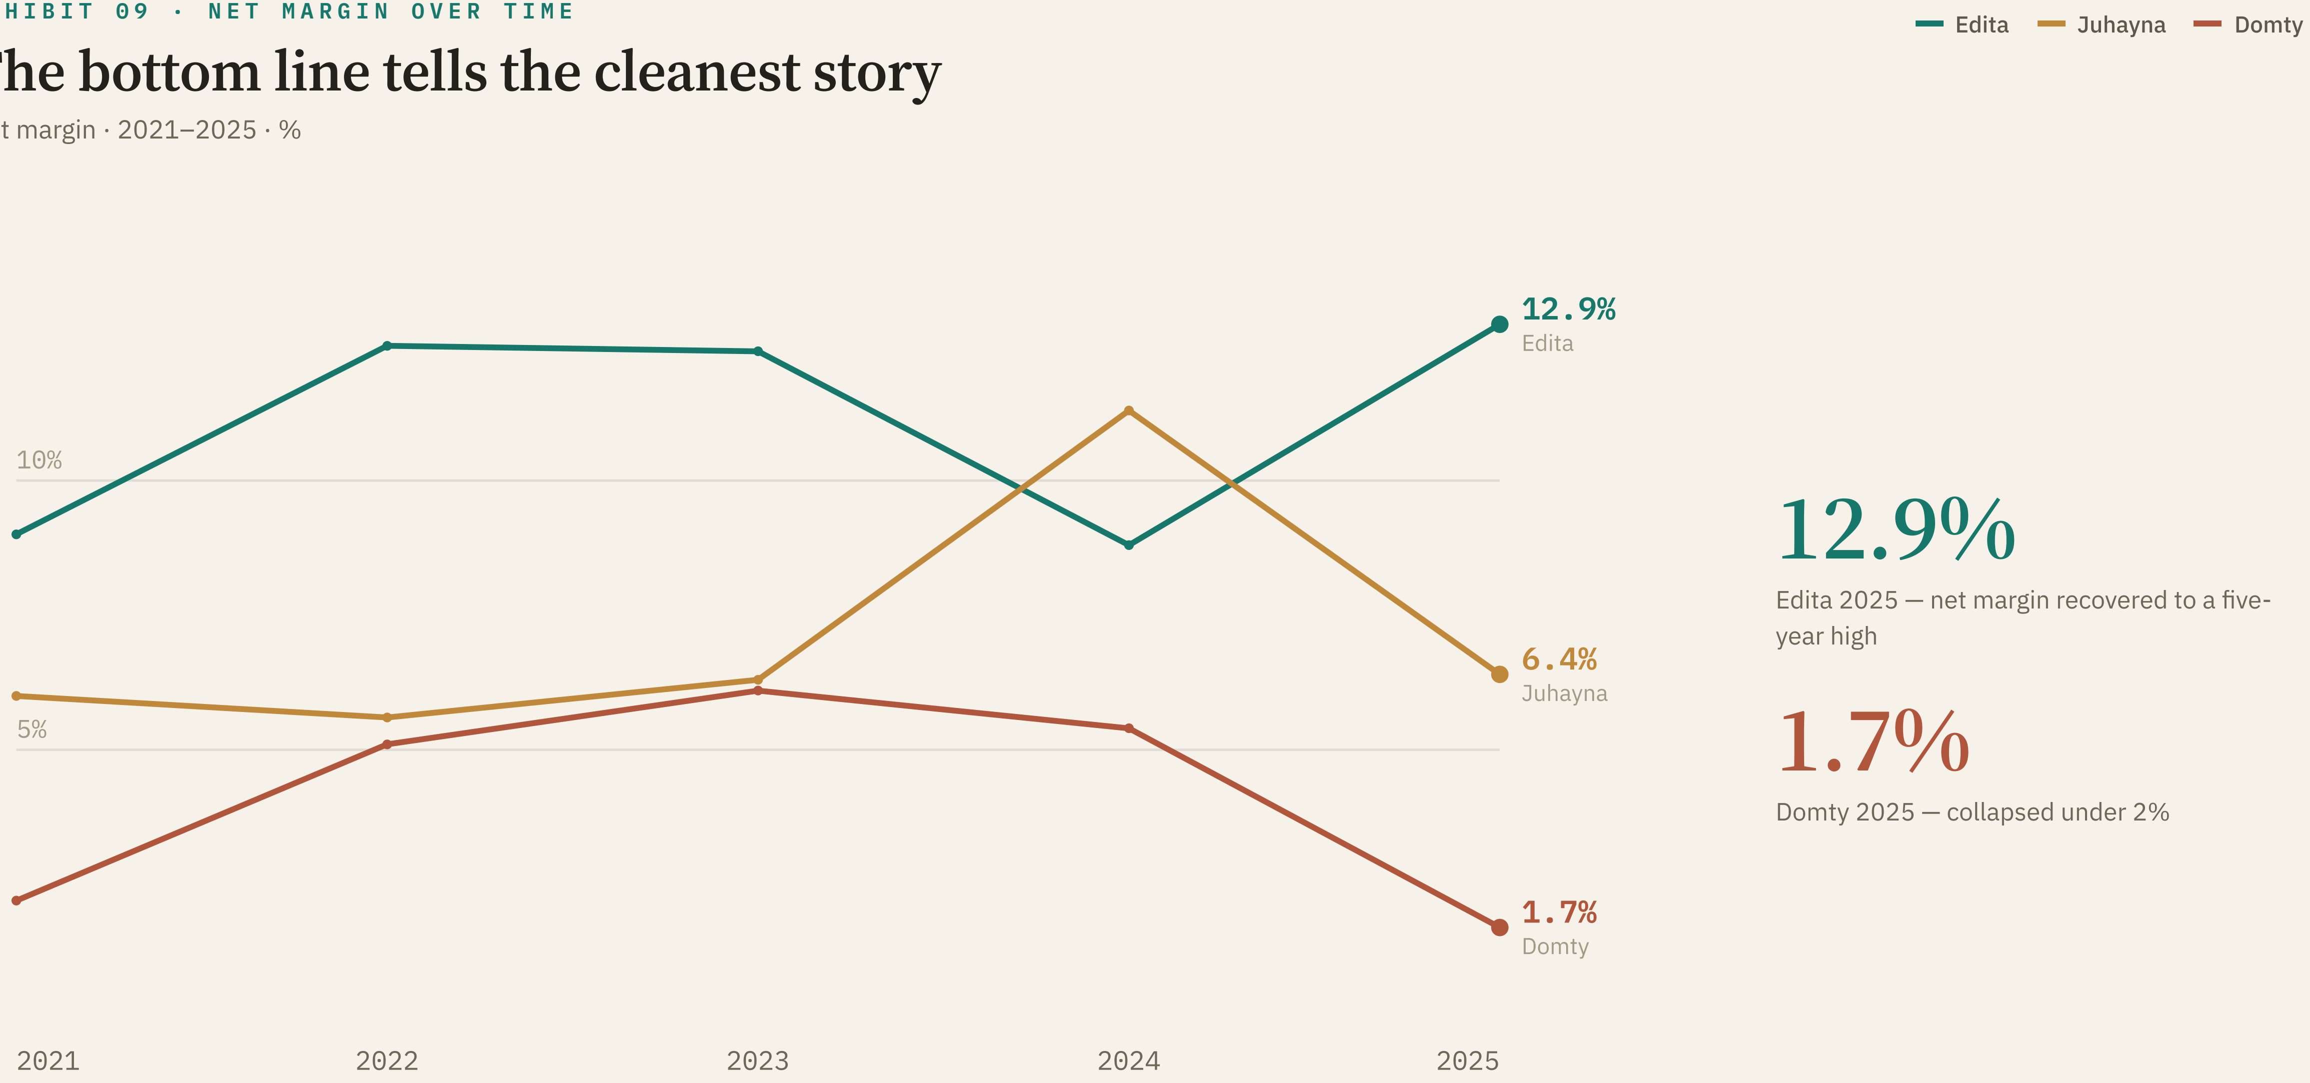
Domty 2025 — fell from 11% as costs surged

— Edita runs the strongest operating engine, recovering to about 18%; Domty's fell from 11% to 8% in 2025 as marketing and finance costs surged.

EXHIBIT 09 · NET MARGIN OVER TIME

The bottom line tells the cleanest story

Net margin · 2021–2025 · %



12.9%

Edita 2025 — net margin recovered to a five-year high

1.7%

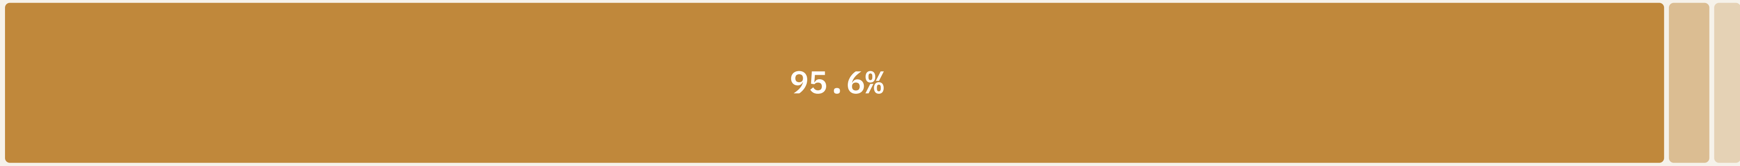
Domty 2025 — collapsed under 2%

— Edita's net margin recovered to about 13%; Juhayna's halved as FX bit; Domty's fell under 2% — the widest quality gap of all.

EXHIBIT 10 · COST ANATOMY

Almost no cushion: 96% of cost is inputs

Juhayna cost of sales by component · Note 4 · **FY2023**



Raw materials & packaging	95.6%
Change in finished goods	2.6%
Depreciation	1.8%

95.6%
raw materials & packaging — almost all of the cost base

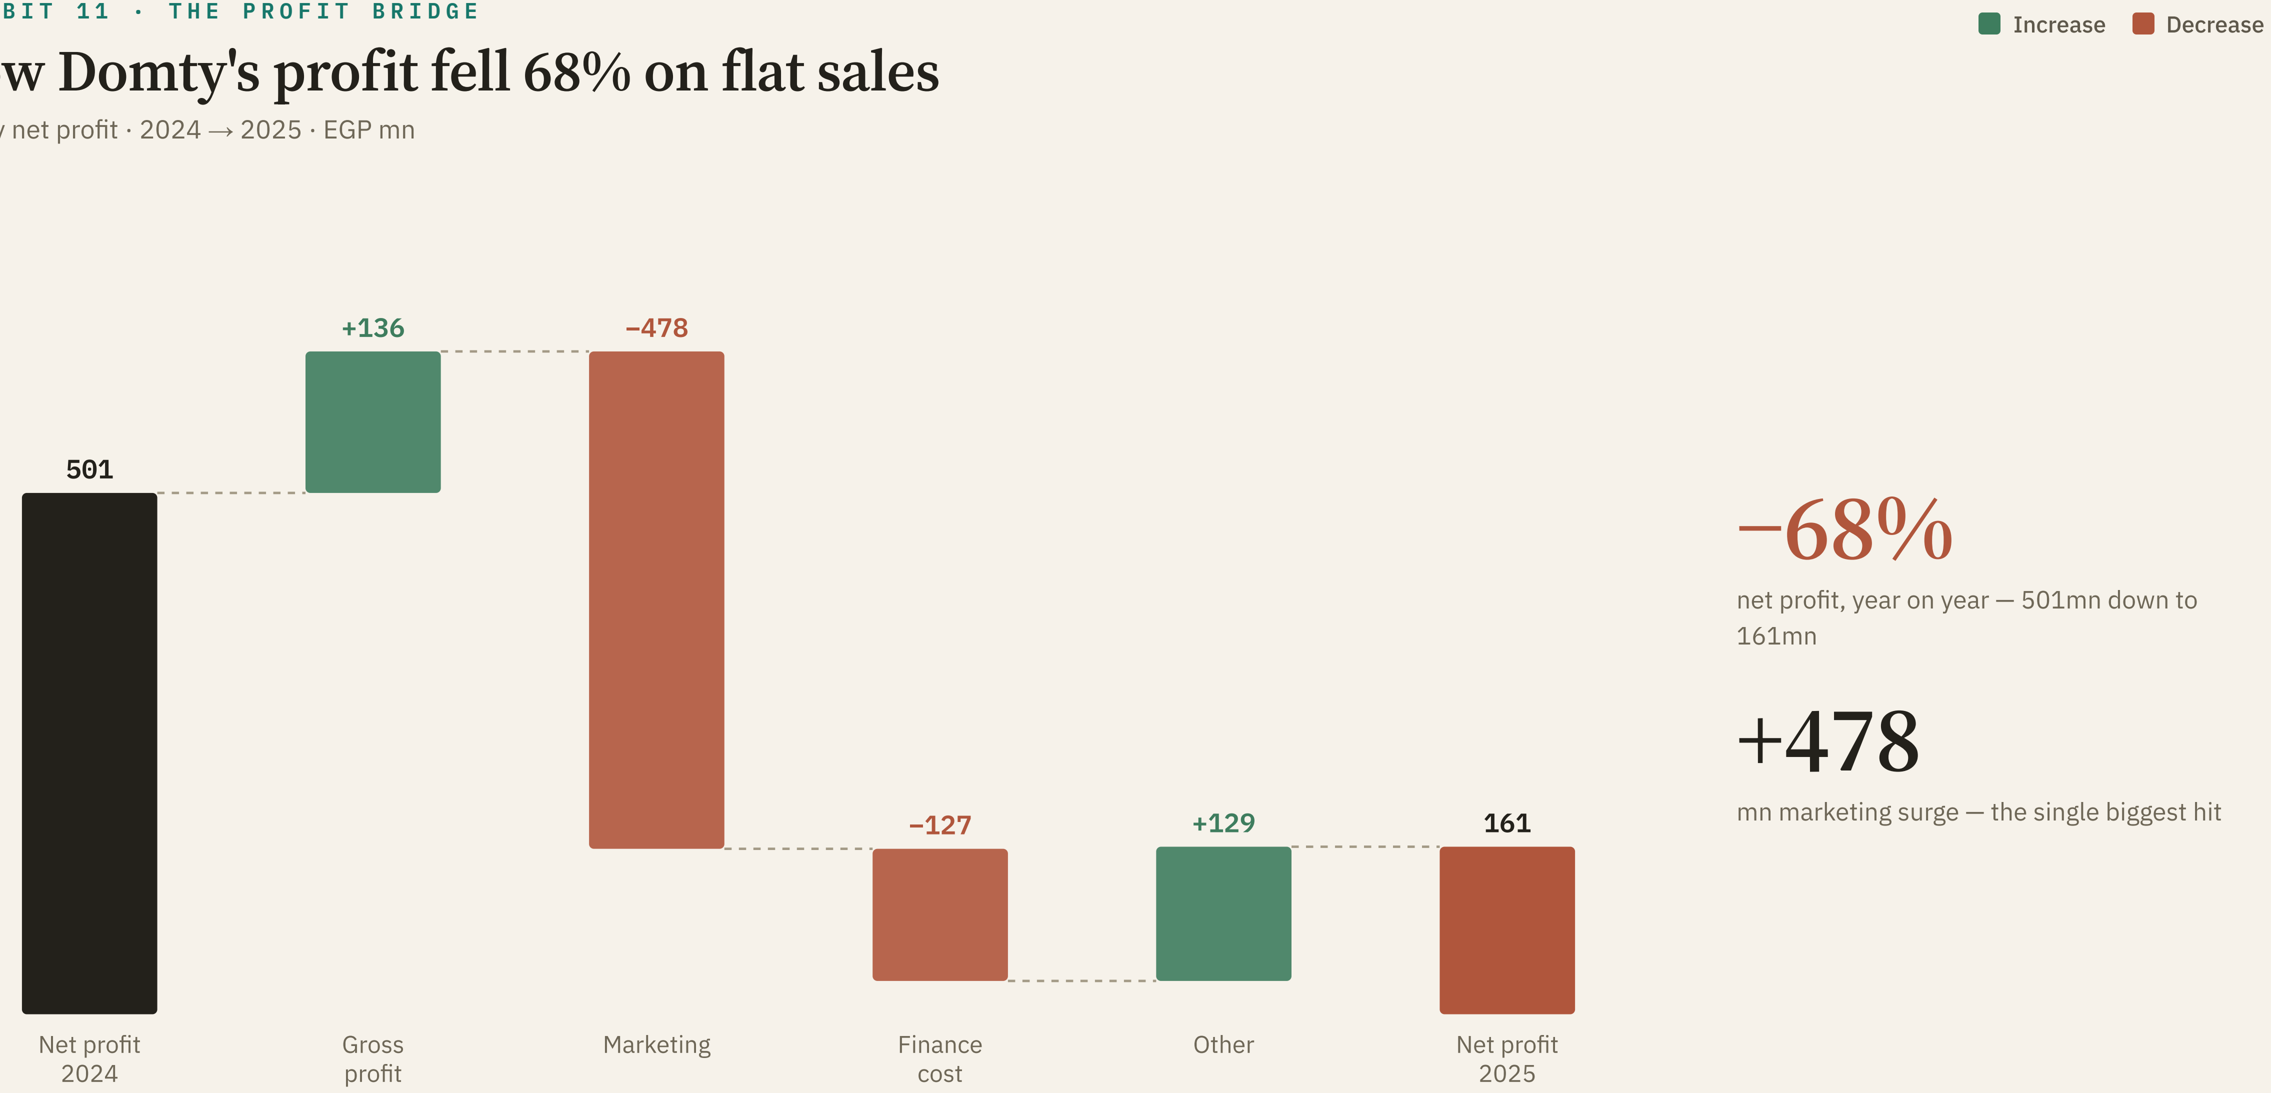
1.8%
depreciation — the only real fixed-cost buffer, and it is tiny

— With about 96% of cost in raw materials and packaging, there is little fixed-cost cushion to absorb a currency shock — margin moves with input prices.

EXHIBIT 11 · THE PROFIT BRIDGE

How Domty's profit fell 68% on flat sales

Domty net profit · 2024 → 2025 · EGP mn



−68%

net profit, year on year — 501mn down to 161mn

+478

mn marketing surge — the single biggest hit

— Gross profit actually rose — but a 478mn marketing surge and 127mn higher finance cost turned a 501mn profit into 161mn.

03

The dollar & EAS 13

The currency force behind the margin split — and where it hides.

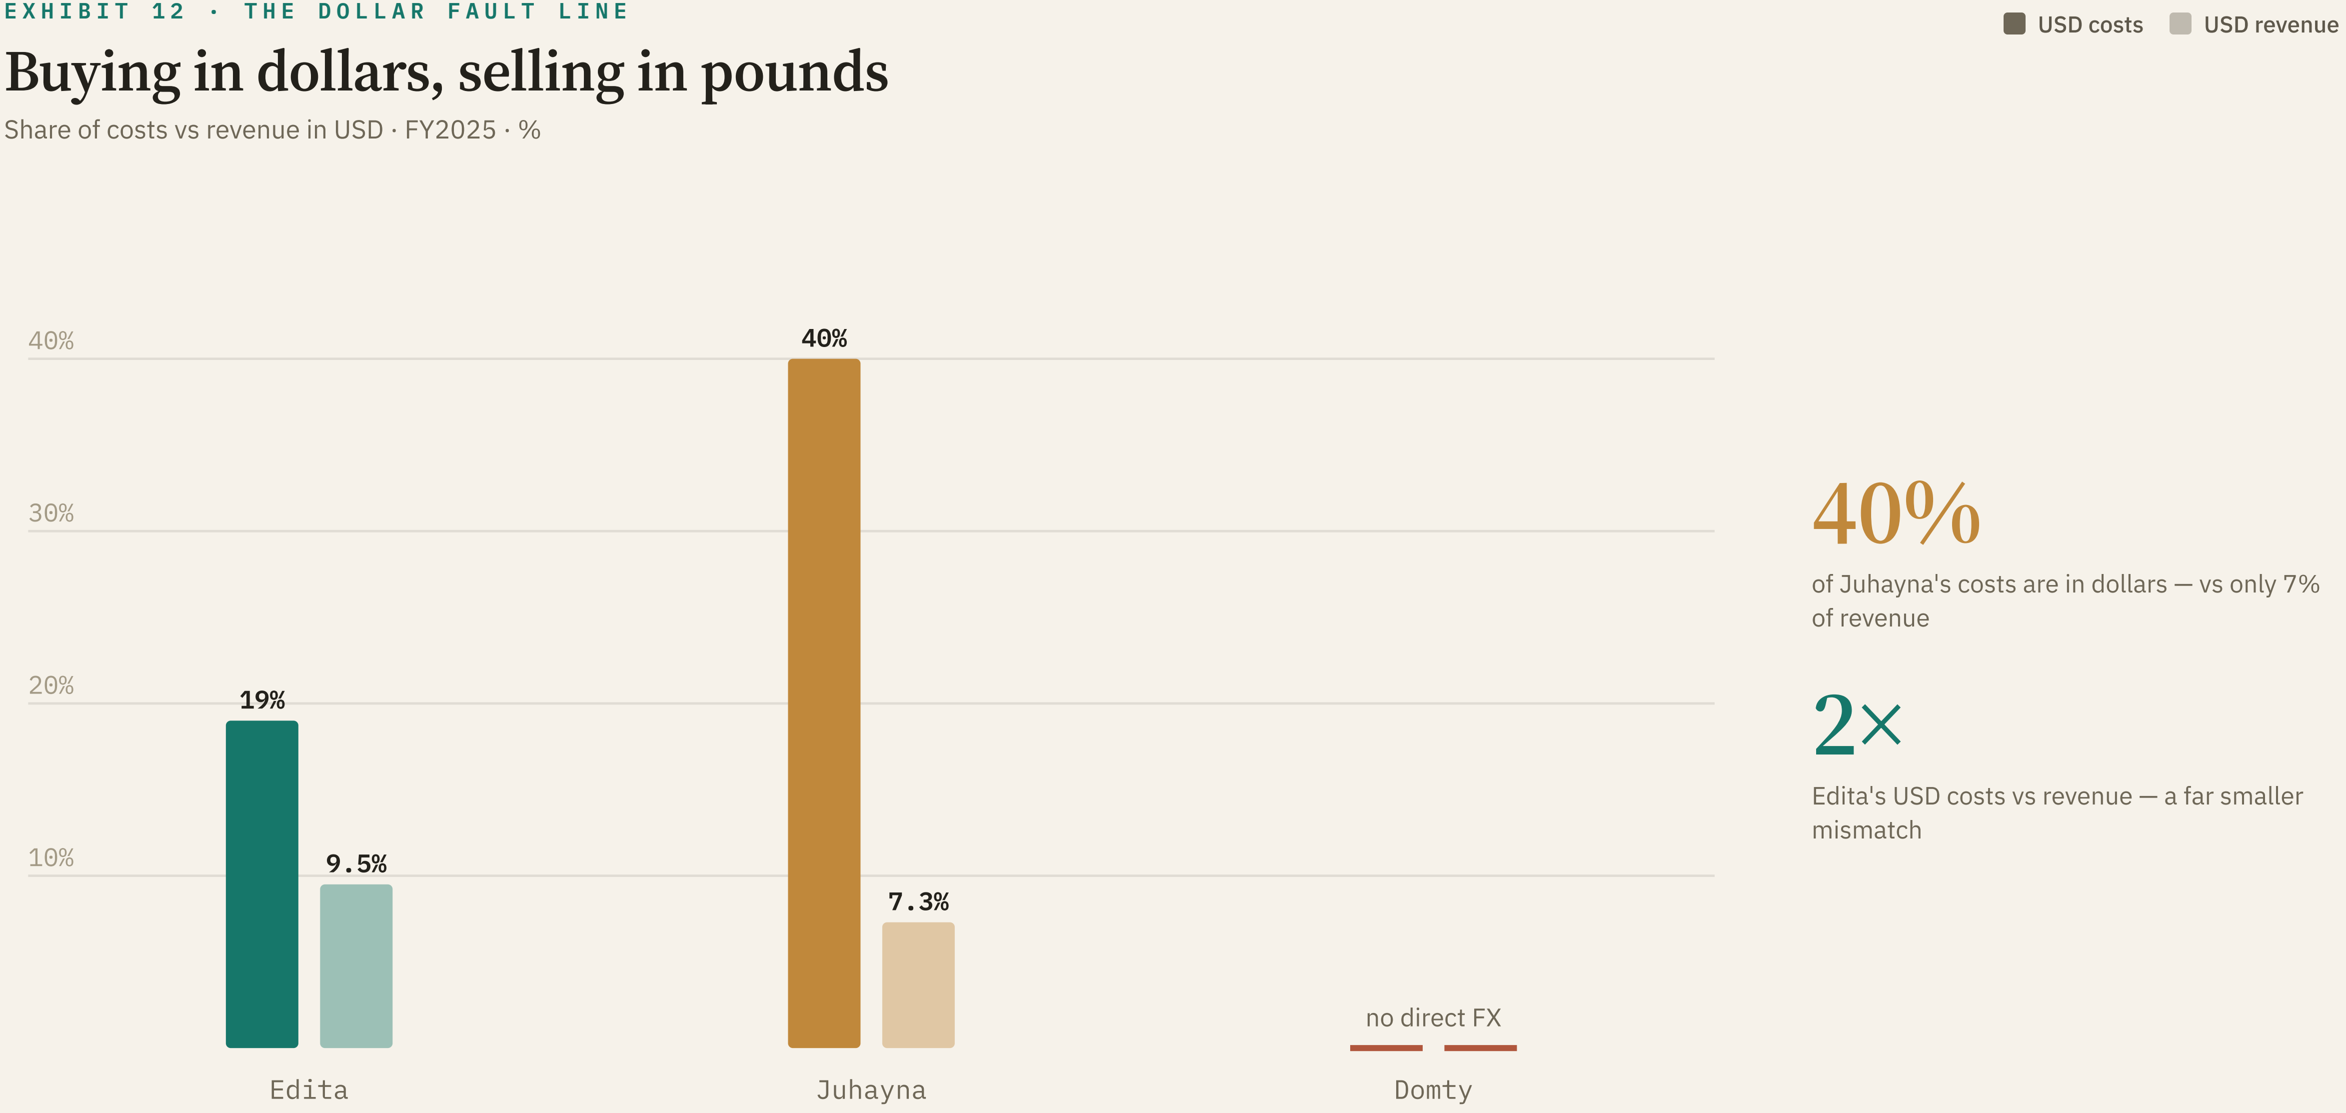
> *The margin split was not an accident of operations — it was the dollar, and an accounting choice about where to put the loss.*

12 The dollar fault line: cost vs revenue
13 Four years of FX, netted out
14 Where the loss went: income vs equity
15 Reported vs true profit
16 The hedge, in quarterly margins

EXHIBIT 12 · THE DOLLAR FAULT LINE

Buying in dollars, selling in pounds

Share of costs vs revenue in USD · FY2025 · %



40%

of Juhayna's costs are in dollars — vs only 7% of revenue

2×

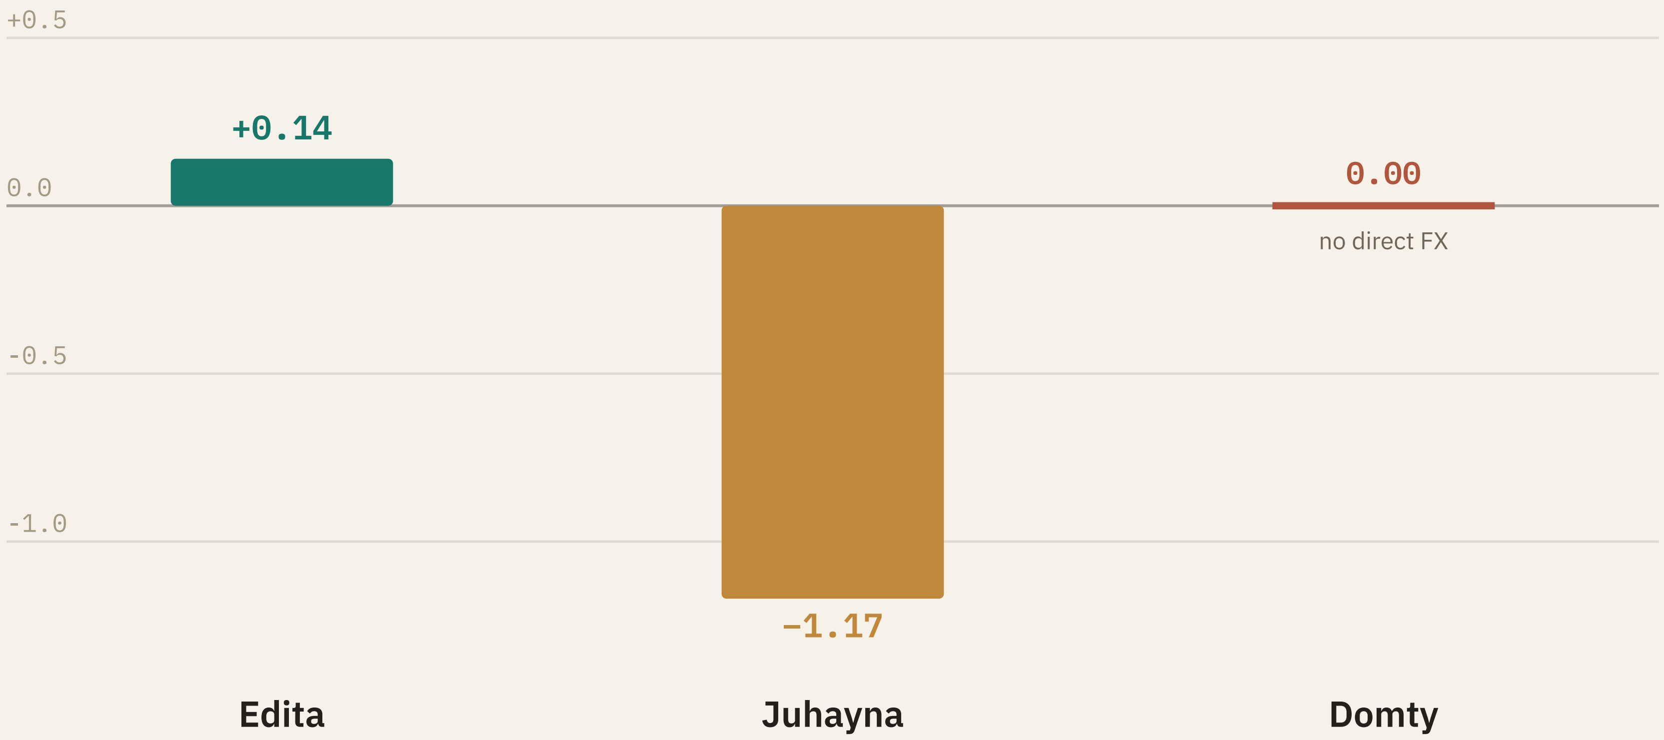
Edita's USD costs vs revenue — a far smaller mismatch

– Juhayna buys about 40% of its costs in dollars but earns only about 7% in dollars — a structural mismatch Edita largely avoids and Domty does not carry.

EXHIBIT 13 · FOUR YEARS OF FX

The currency's cumulative verdict, 2022–2025

Cumulative FX impact, income statement + equity · EGP bn



−1.17

bn — Juhayna's real four-year currency loss

+0.14

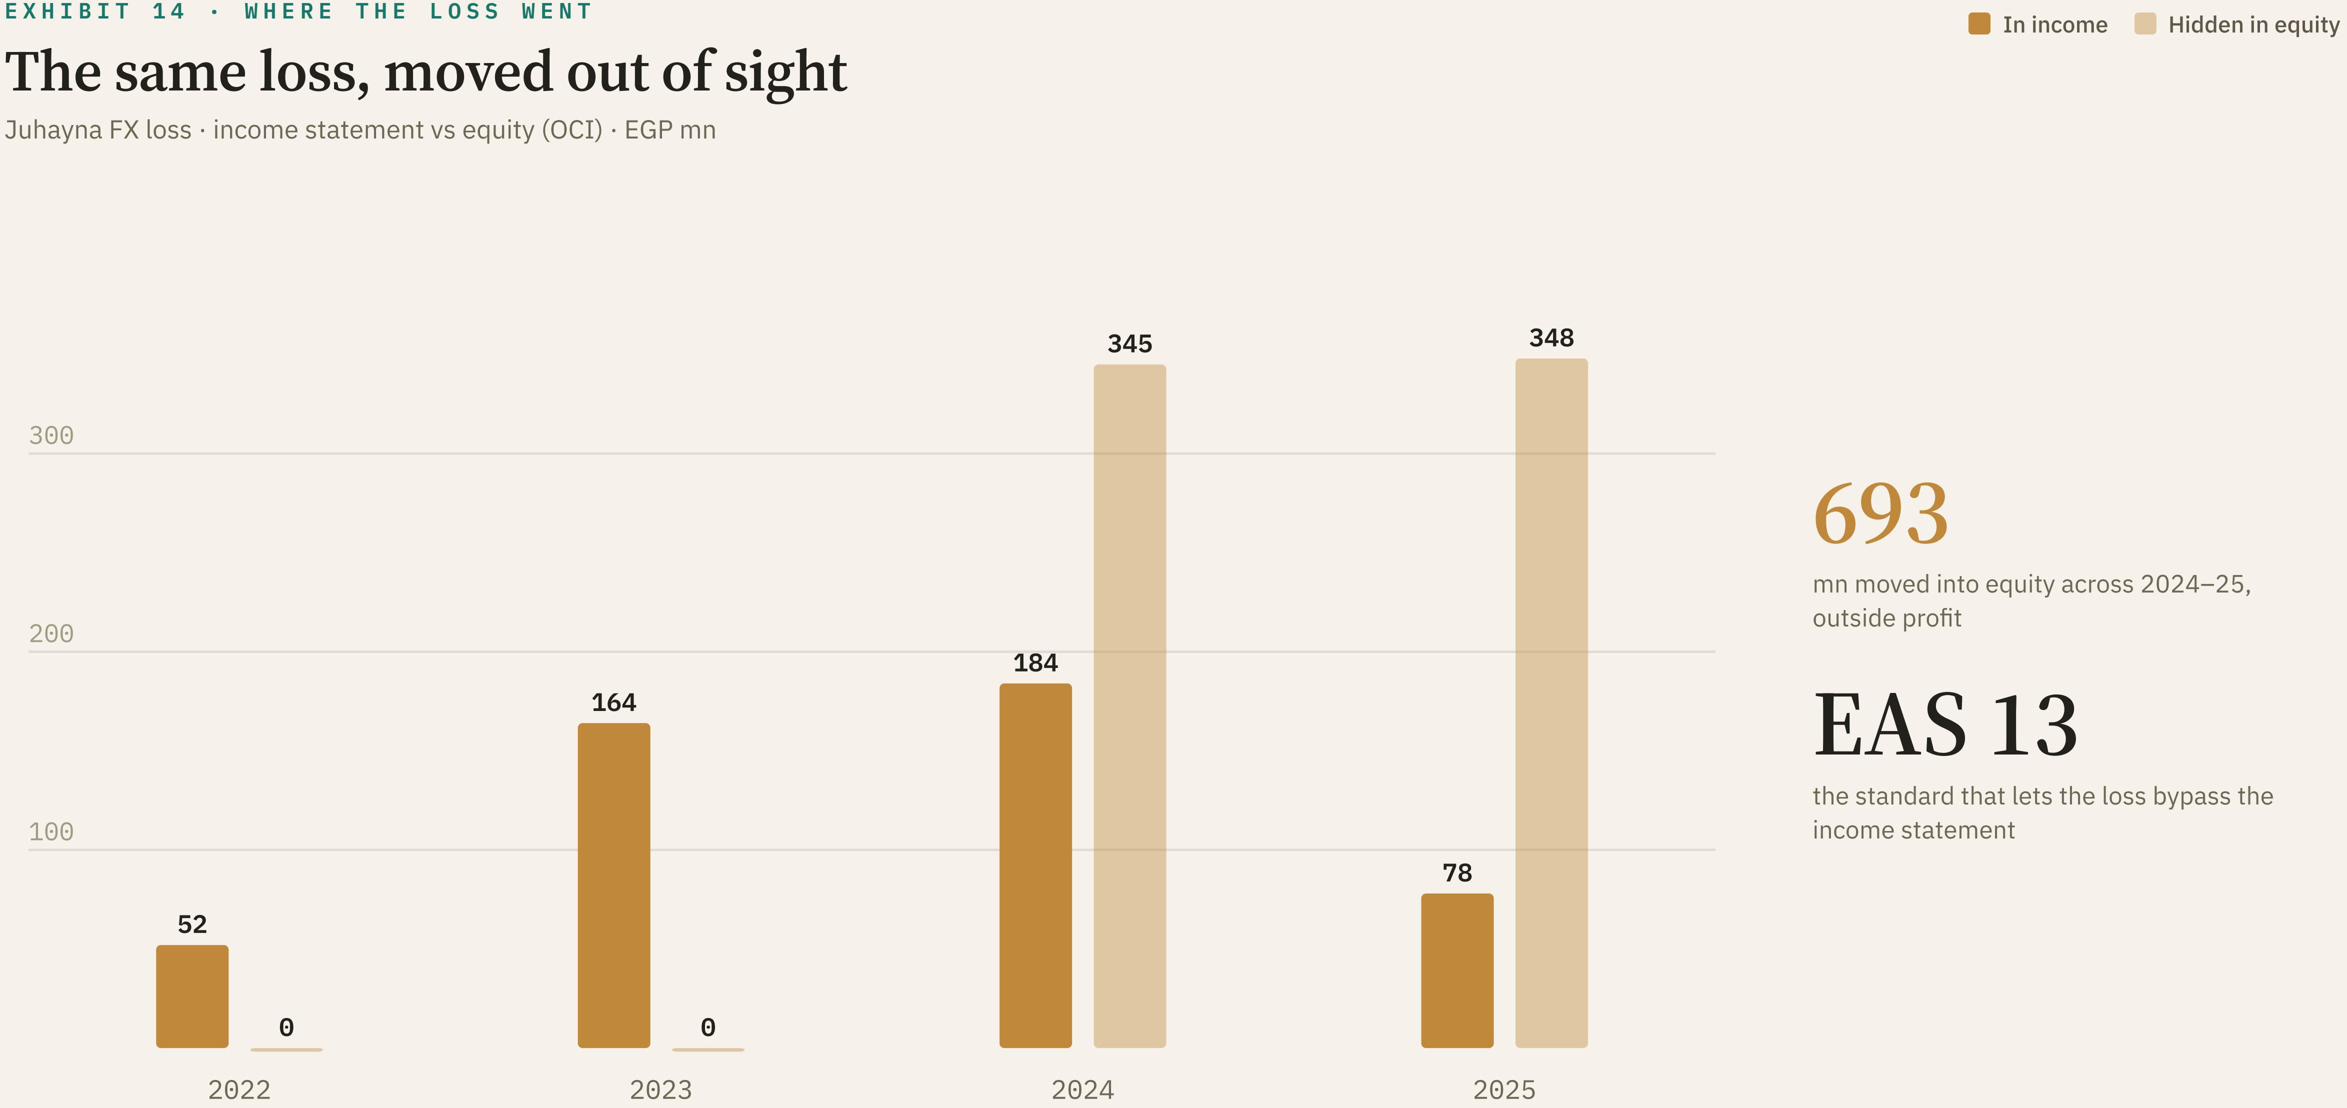
bn — Edita's net FX gain over the same window

— Over four years the currency took about 1.17bn from Juhayna, gave Edita a small gain, and left Domty untouched — the gap between the three structures.

EXHIBIT 14 · WHERE THE LOSS WENT

The same loss, moved out of sight

Juhayna FX loss · income statement vs equity (OCI) · EGP mn



693

mn moved into equity across 2024–25, outside profit

EAS 13

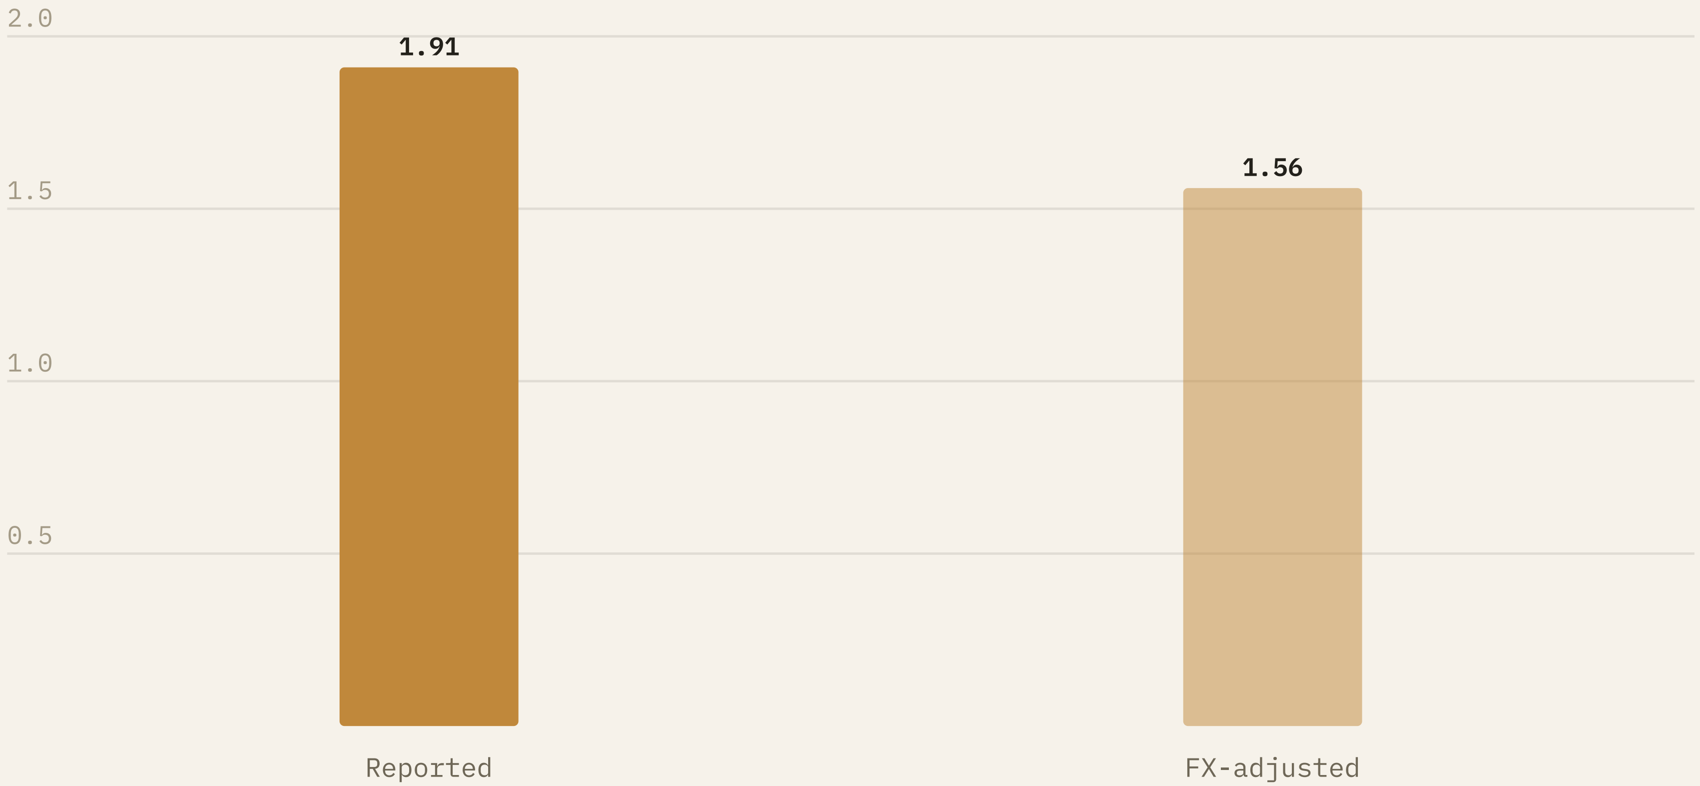
the standard that lets the loss bypass the income statement

— From 2024 Juhayna moved most of its FX loss out of the income statement and into equity under EAS 13 — reported profit looks calmer than the cash reality.

EXHIBIT 15 · REPORTED VS TRUE PROFIT

What Juhayna really earned in 2025

Juhayna net profit · reported vs FX-adjusted · EGP bn



−18%

haircut to reported profit once FX is put back through

1.56

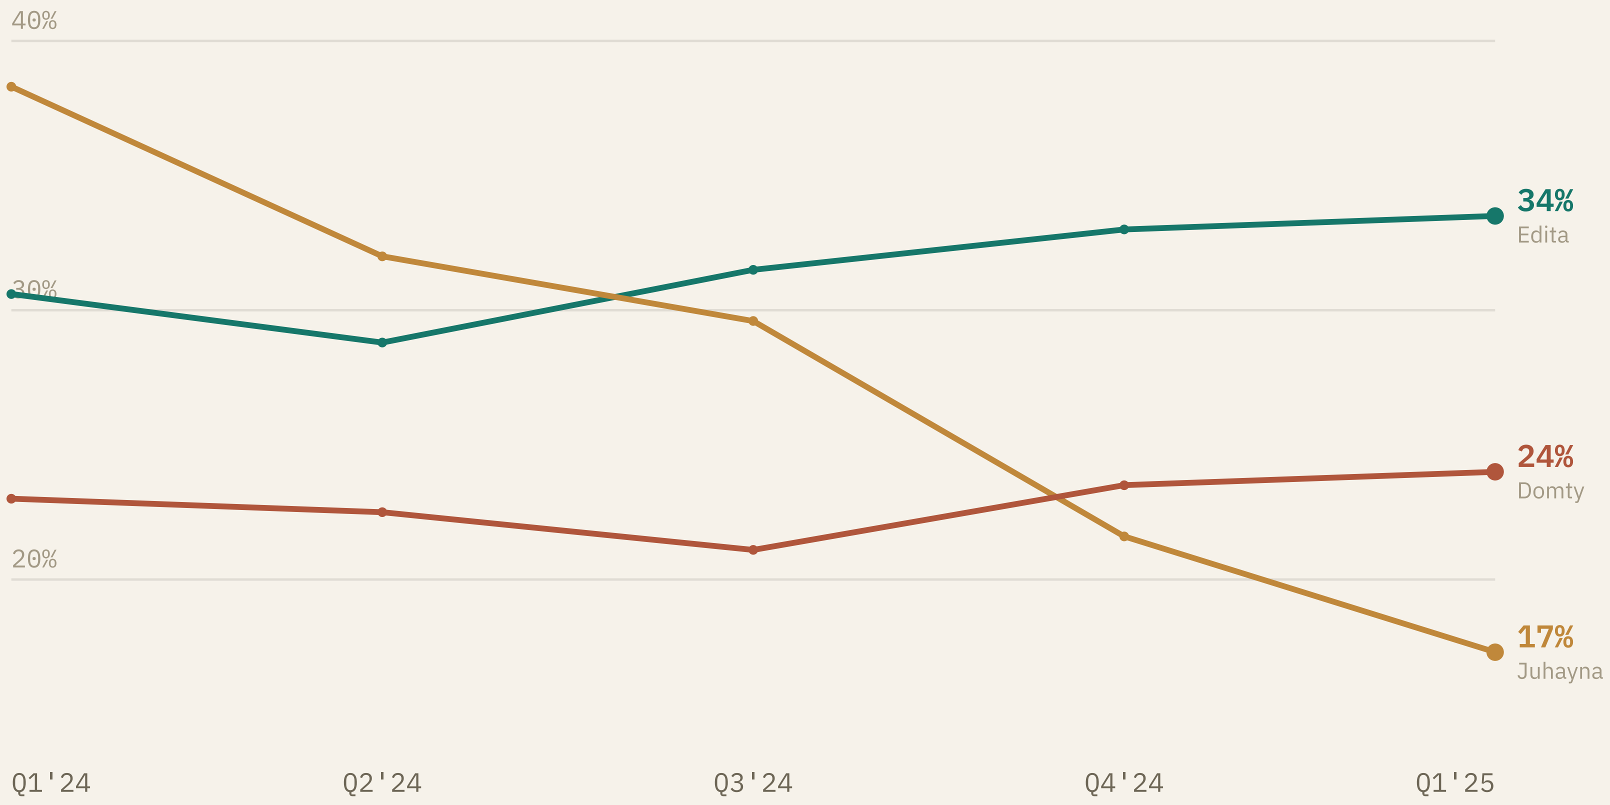
bn — the profit that survives an honest FX view

— Put the hidden FX loss back through the income statement and Juhayna's 2025 profit falls about 18% — from 1.91bn reported to roughly 1.56bn.

EXHIBIT 16 · THE HEDGE, IN NUMBERS

Whose margin held when the pound fell

Quarterly gross margin through the devaluation · Q1'24–Q1'25 · %



~30%

Edita held its quarterly gross margin through the shock

17.3%

Juhayna's trough — more than ten points lower

Q1'25 also reflects consolidation and FX distortion.

– Through the devaluation Edita held its quarterly gross margin around 30%, while Juhayna's fell to about 17% at the trough — more than ten points apart.

04

Balance sheet & debt

How heavy each structure is — and what the debt costs.

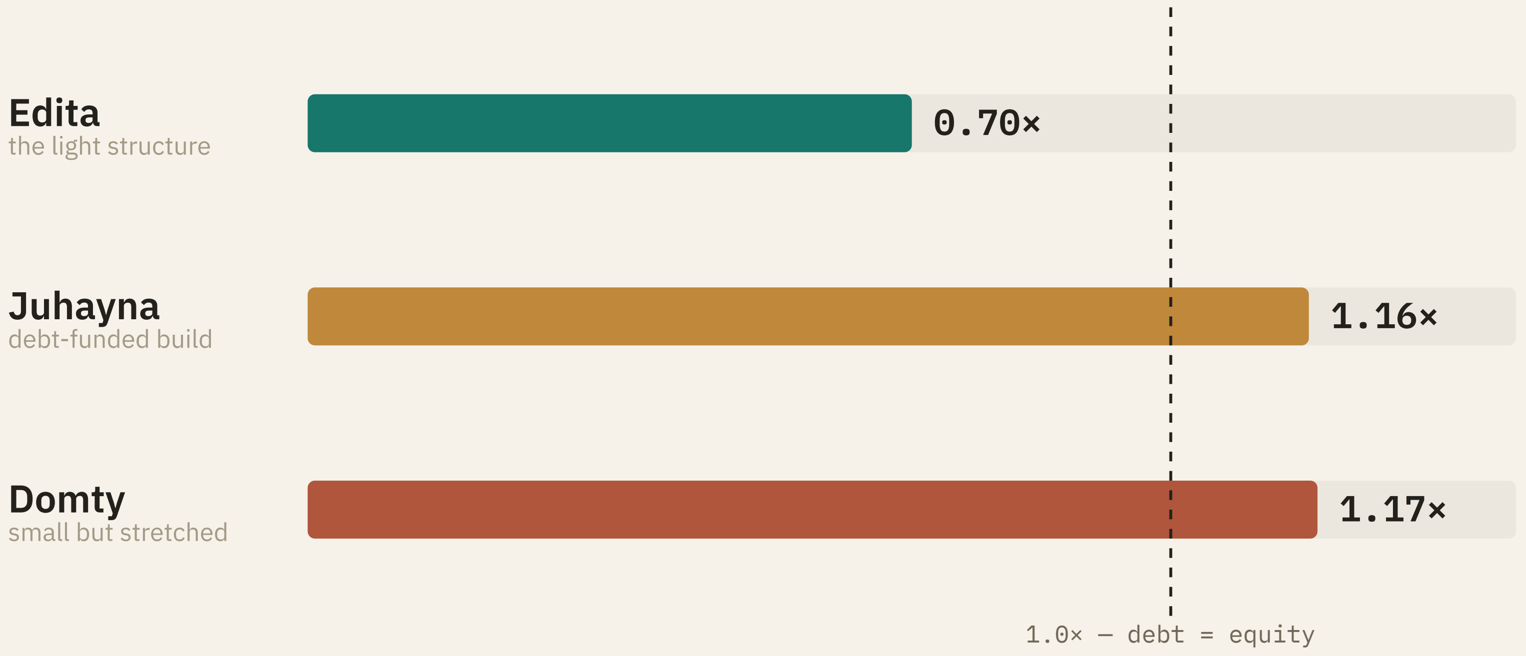
> *A thin margin is survivable with a light balance sheet. The danger is a thin margin meeting heavy, expensive debt.*

17 Leverage: net debt to equity
18 How the debt was built
19 What that debt costs
20 Interest coverage over time
21 When finance eats operations

EXHIBIT 17 · LEVERAGE

How heavy is each balance sheet?

Net debt to equity · FY2025 · ×



0.70×

Edita net debt to equity — comfortably below parity

1.17×

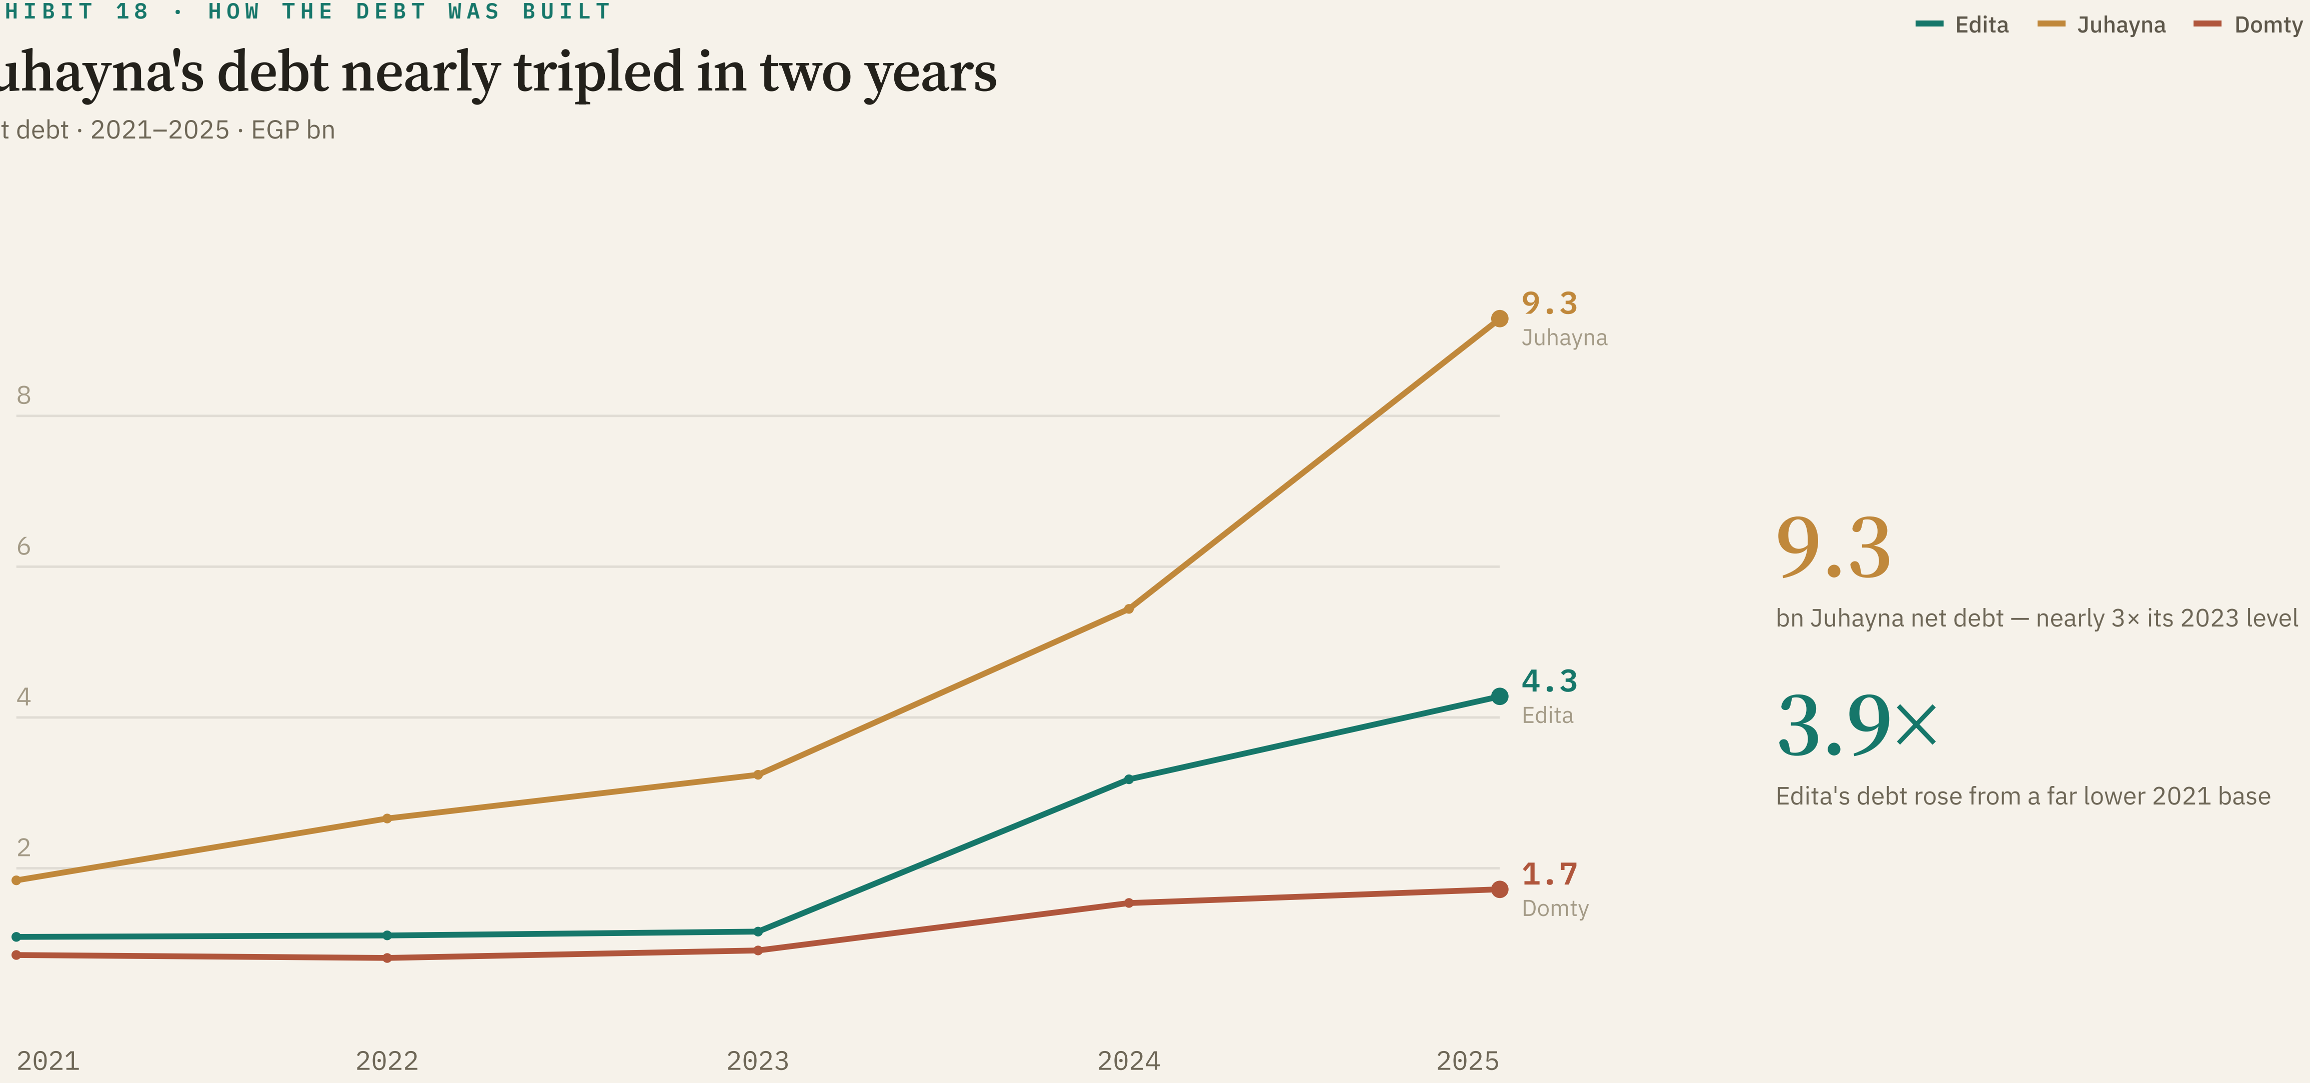
Domty — most levered relative to its equity base

– Edita carries the lightest balance sheet at 0.70×, while Juhayna and Domty both run debt above equity — heavy structures meeting thin margins.

EXHIBIT 18 · HOW THE DEBT WAS BUILT

Juhayna's debt nearly tripled in two years

Net debt · 2021–2025 · EGP bn



9.3

bn Juhayna net debt — nearly 3× its 2023 level

3.9×

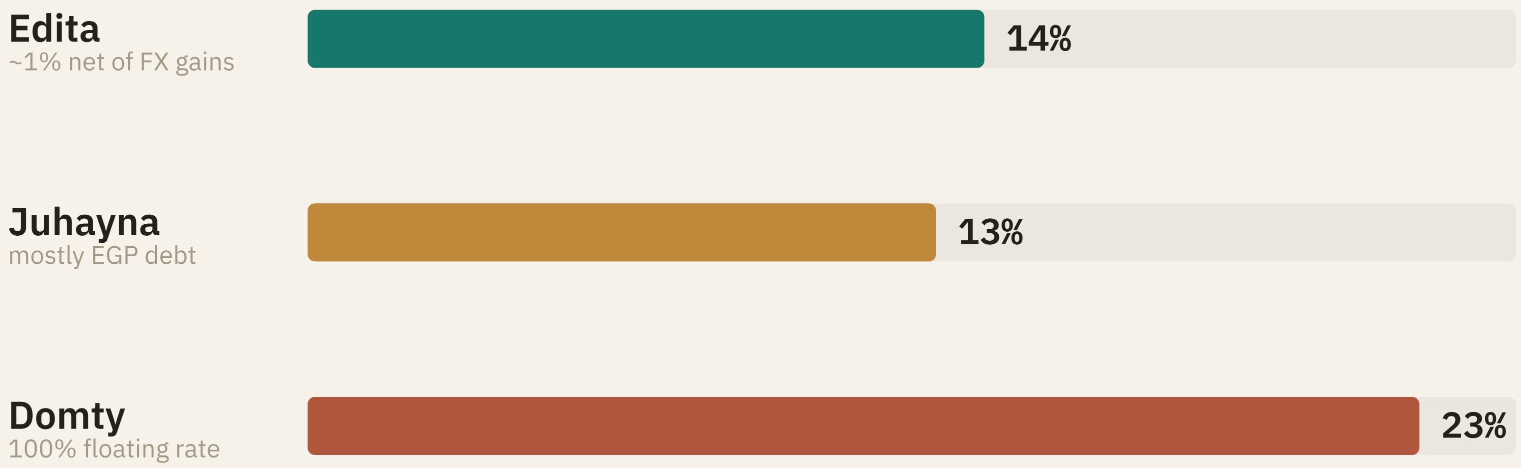
Edita's debt rose from a far lower 2021 base

— Juhayna's net debt roughly tripled in two years to 9.3bn as it funded its expansion; Edita's rose too but from a far lower base, and Domty's stayed contained.

EXHIBIT 19 · WHAT THE DEBT COSTS

The same debt, priced very differently

Implied cost of debt · FY2025 · %



23%

Domty's implied cost of debt — 100% floating into a rate shock

~1%

Edita's net cost once FX gains are set against interest

– Domty pays about 23% on fully floating debt into a rate shock, while Edita's FX gains offset most of its interest — the same macro, very different cost.

EXHIBIT 20 · INTEREST COVERAGE

How many times over can each pay its interest?

Operating profit ÷ interest expense · 2021–2025 · ×

7.1×

Edita — comfortable coverage even after the shock

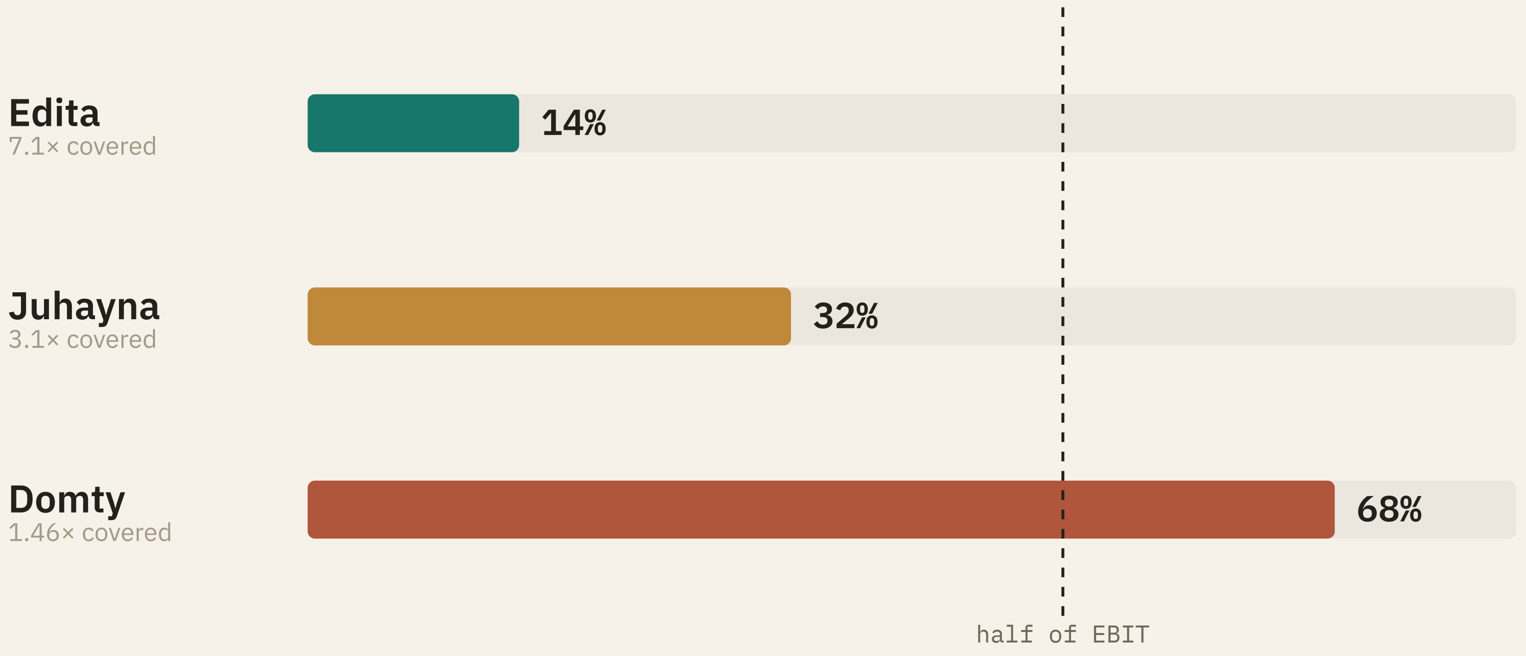
1.46×

Domty — barely earns its interest bill

— Coverage fell for all three through the rate shock, but Domty's dropped to 1.46× — barely covering interest — while Edita's stayed comfortably above 7×.

How much of operating profit goes to lenders

Interest as a share of operating profit · FY2025 · %



68%

of Domty's operating profit is consumed by interest

14%

of Edita's — leaving most of it for shareholders

– Interest takes about two-thirds of Domty's operating profit, versus a third at Juhayna and a seventh at Edita — the clearest measure of financing stress.

05

Returns & quality

What each earns on capital — and how honestly it is earned.

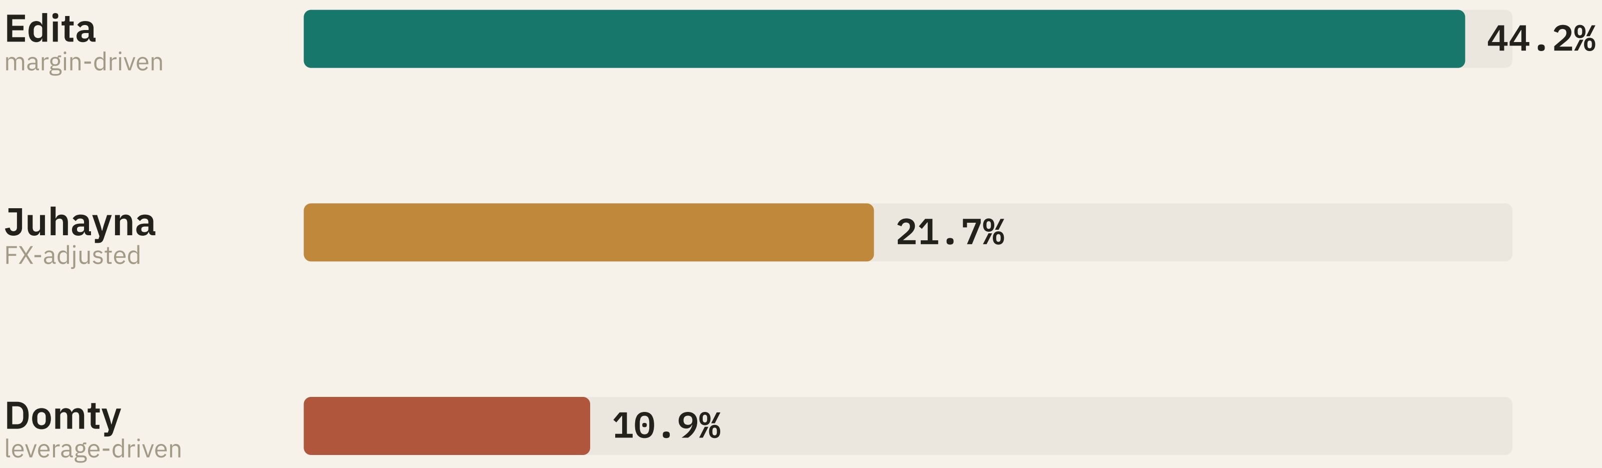
> *A high return built on margin is durable; one built only on leverage borrows against the future.*

22 Return on equity
23 DuPont: what drives the return
24 ROIC vs the cost of debt
25 Cash conversion cycle
26 Liquidity & solvency

EXHIBIT 22 · RETURN ON EQUITY

What shareholders actually earn

Return on equity · FY2025 · % · Juhayna on FX-adjusted basis



44%

Edita ROE — by far the highest return in the field

11%

Domty — but watch how that return is built

— Edita's 44% ROE towers over the field — but the next exhibit shows whether that is built on margin or simply on borrowed money.

EXHIBIT 23 · DUPONT DECOMPOSITION

The same return, earned three different ways

ROE = net margin × asset turnover × financial leverage · FY2025

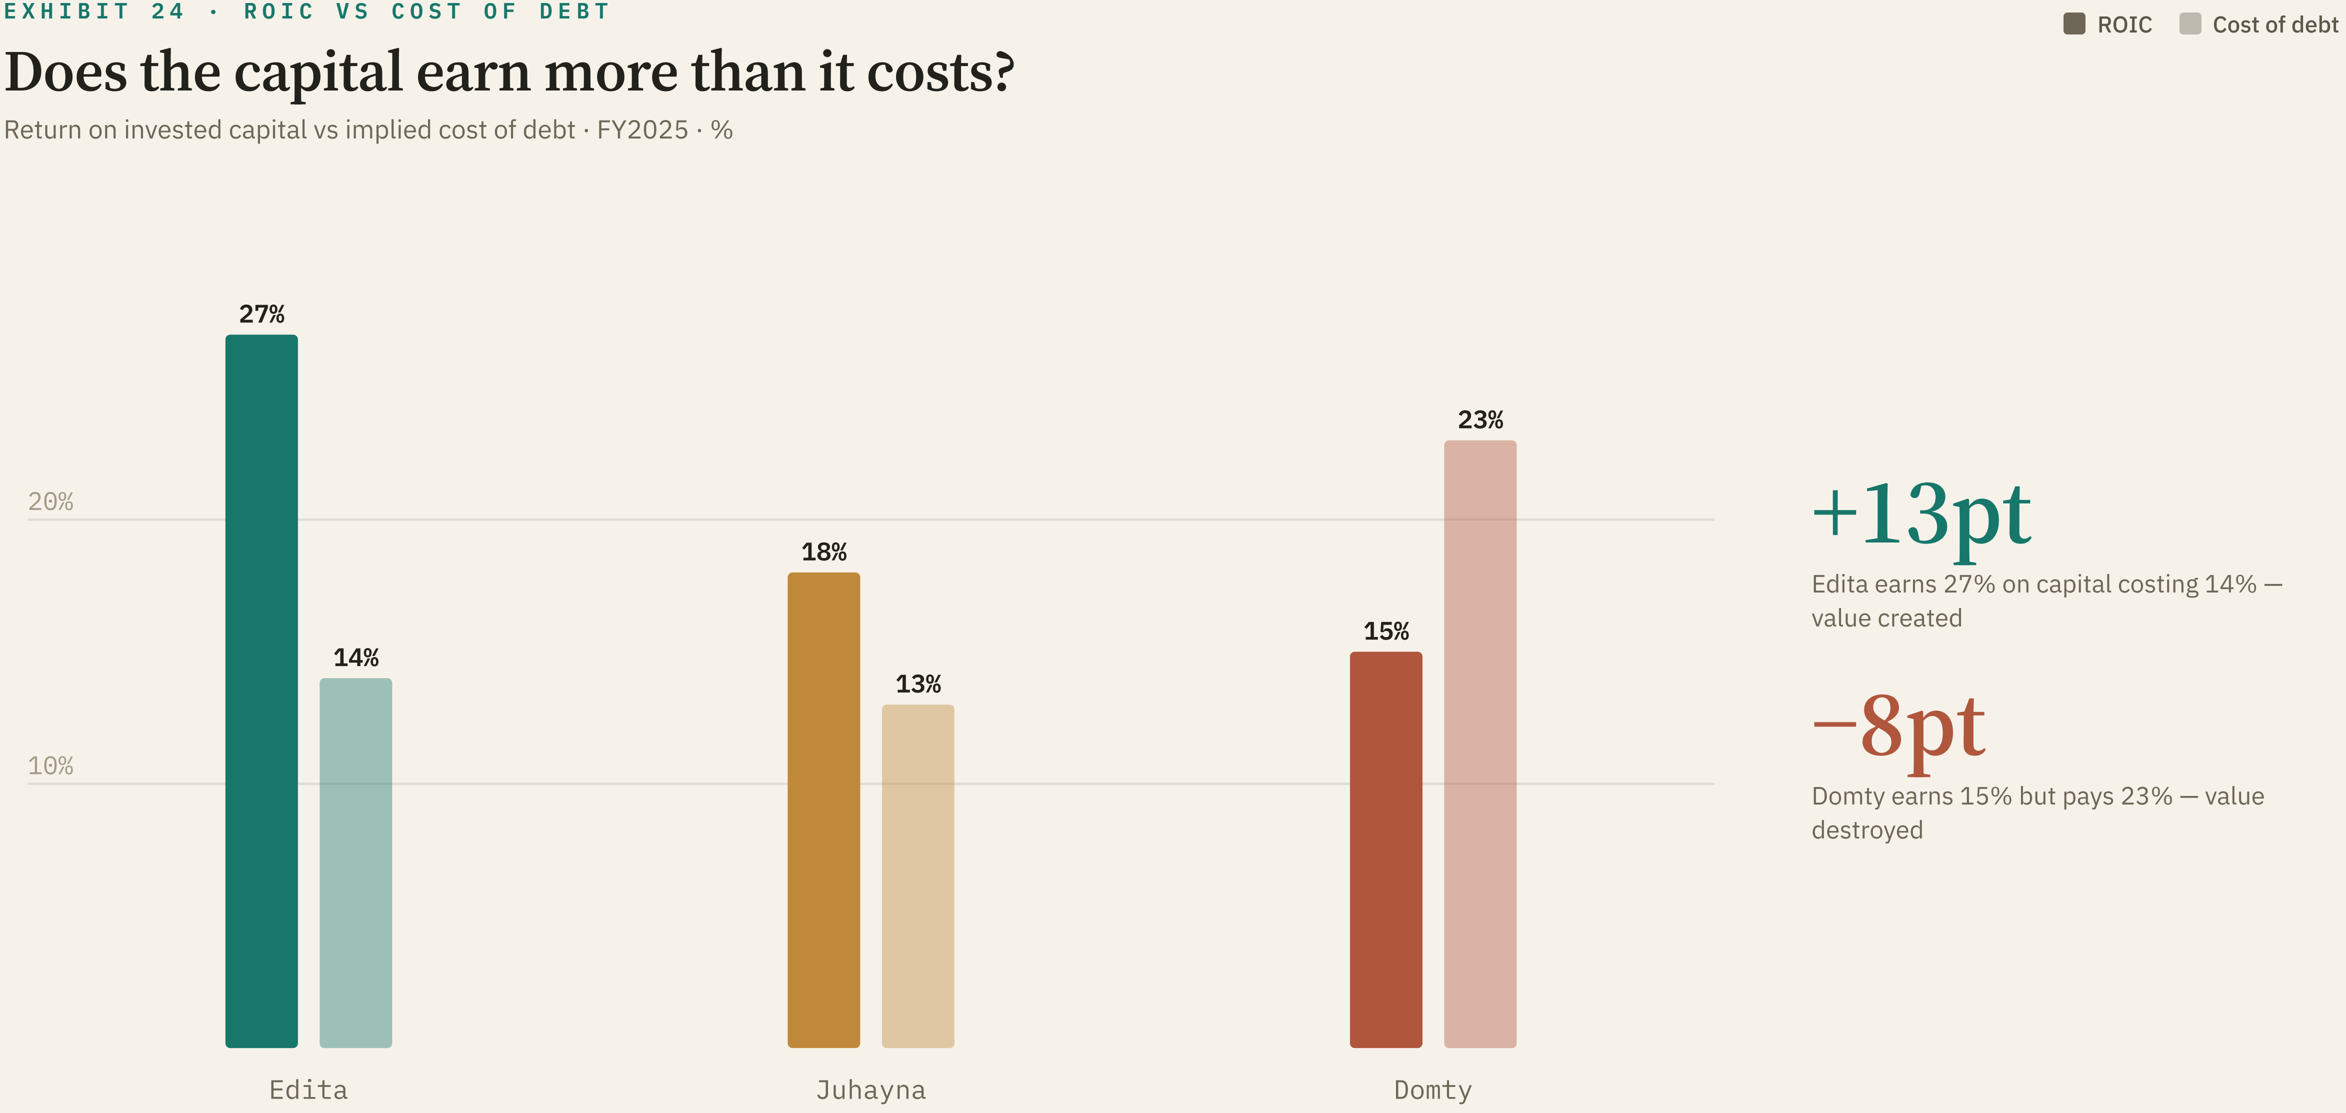
	NET MARGIN	× ASSET TURNOVER	× LEVERAGE	= ROE
Edita margin wins	12.9%	1.42×	2.42×	= 44.2%
Juhayna balanced	6.4%	1.63×	2.30×	= 21.7%
Domty leverage only	1.7%	1.90×	3.25×	= 10.9%

— Edita earns its 44% on margin; Domty's 11% comes almost entirely from a 3.25× leverage multiplier on a 1.7% margin — the same kind of headline, opposite quality.

EXHIBIT 24 · ROIC VS COST OF DEBT

Does the capital earn more than it costs?

Return on invested capital vs implied cost of debt · FY2025 · %



+13pt

Edita earns 27% on capital costing 14% — value created

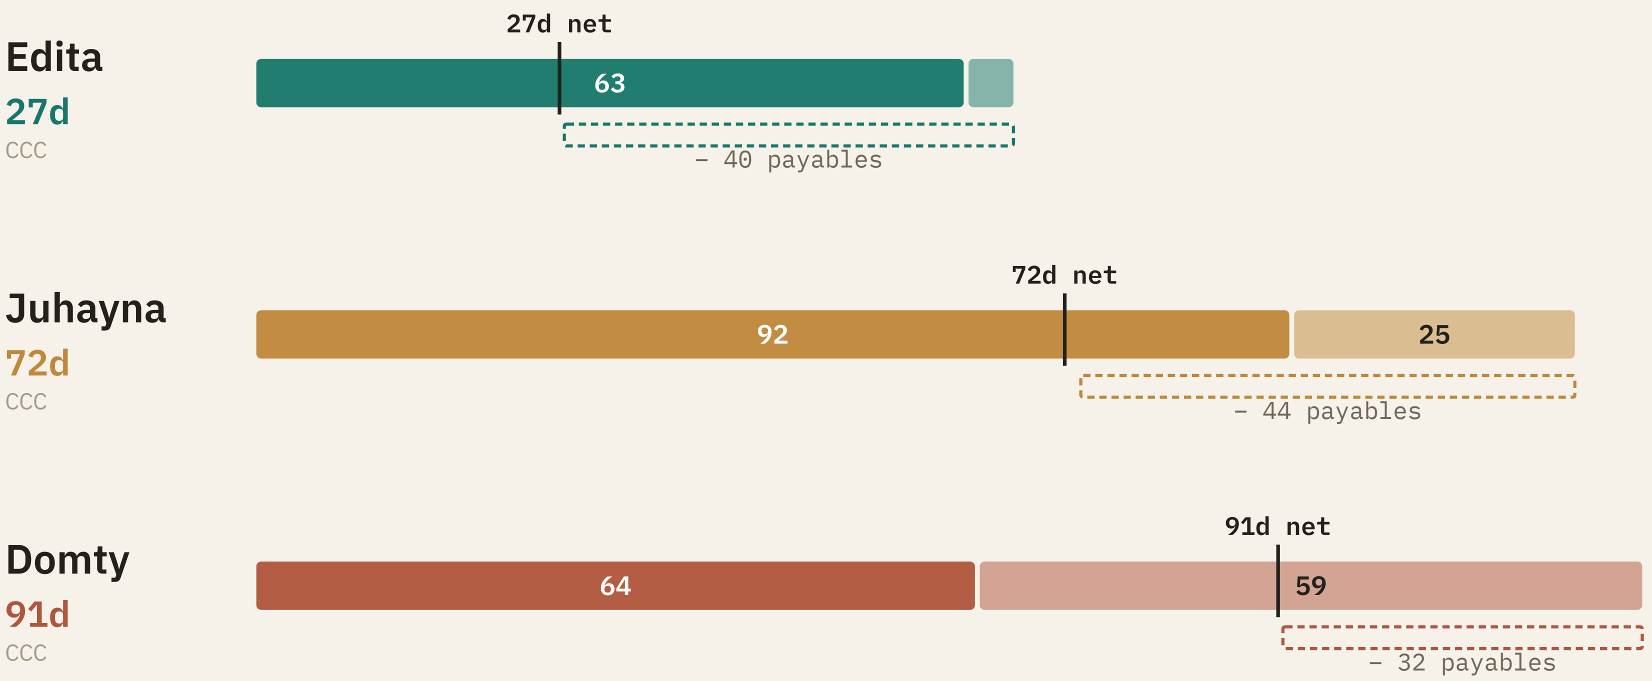
−8pt

Domty earns 15% but pays 23% — value destroyed

– Edita and Juhayna earn well above what their debt costs; Domty earns 15% on capital but pays 23% on its debt — every borrowed pound destroys value.

How long cash is trapped before it returns

Inventory + receivables − payables = cash conversion cycle · FY2025 · days



27 days

Edita's cycle — the leanest working-capital footprint

91 days

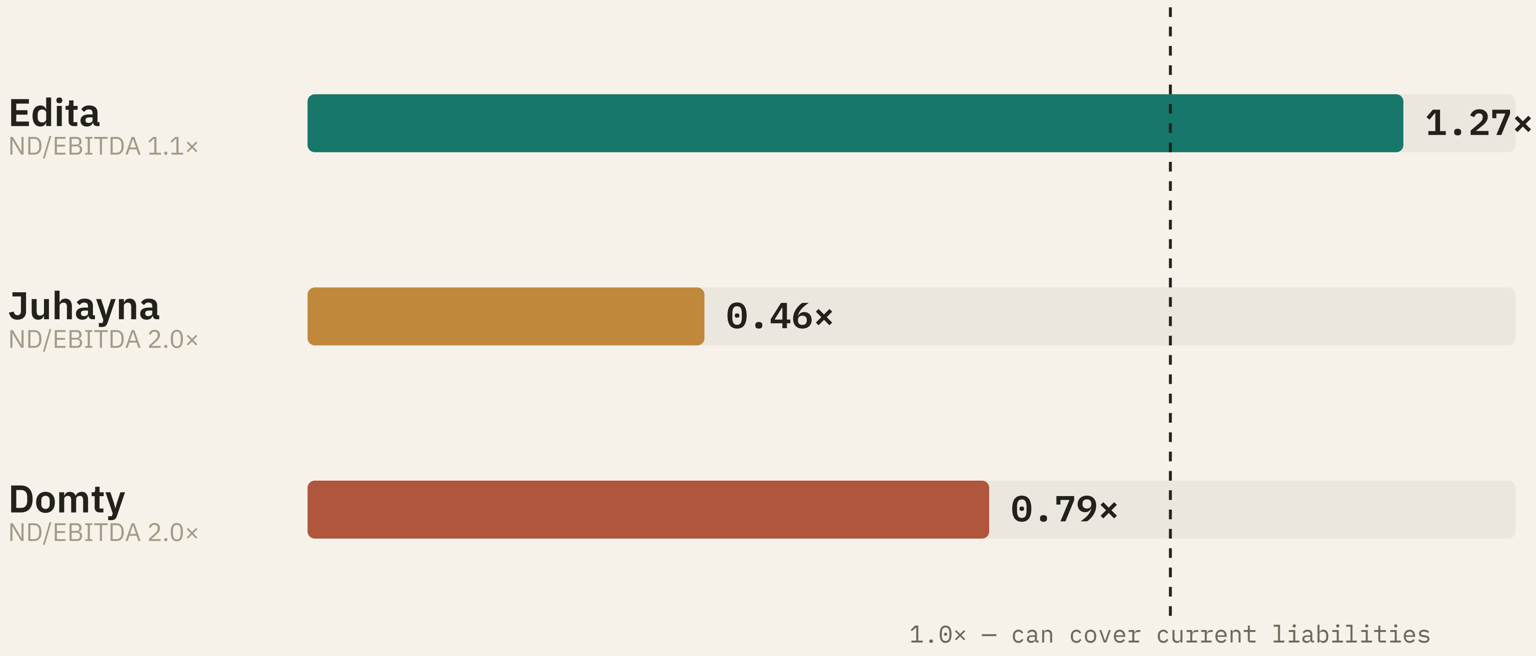
Domty's — 59 of them waiting on receivables alone

– Edita turns its cash in 27 days net; Domty waits 91 days, with 59 days of receivables — far more working capital tied up, and far more debt to fund it.

EXHIBIT 26 · LIQUIDITY & SOLVENCY

Can each cover its bills without its inventory?

Quick ratio · FY2025 · × · net debt / EBITDA noted alongside



1.27×

Edita quick ratio — covers short-term bills comfortably

0.46×

Juhayna — tightest liquidity, on the heaviest leverage

– Edita can cover its short-term bills 1.27 times over without selling inventory; Juhayna sits at 0.46 — the tightest liquidity in the group on top of the heaviest leverage.

06

Valuation

What the market asks you to pay for each structure.

> *Quality and price are different questions — and the headline multiple does not always tell the truth.*

27 Quality vs price

28 P/E: reported vs true

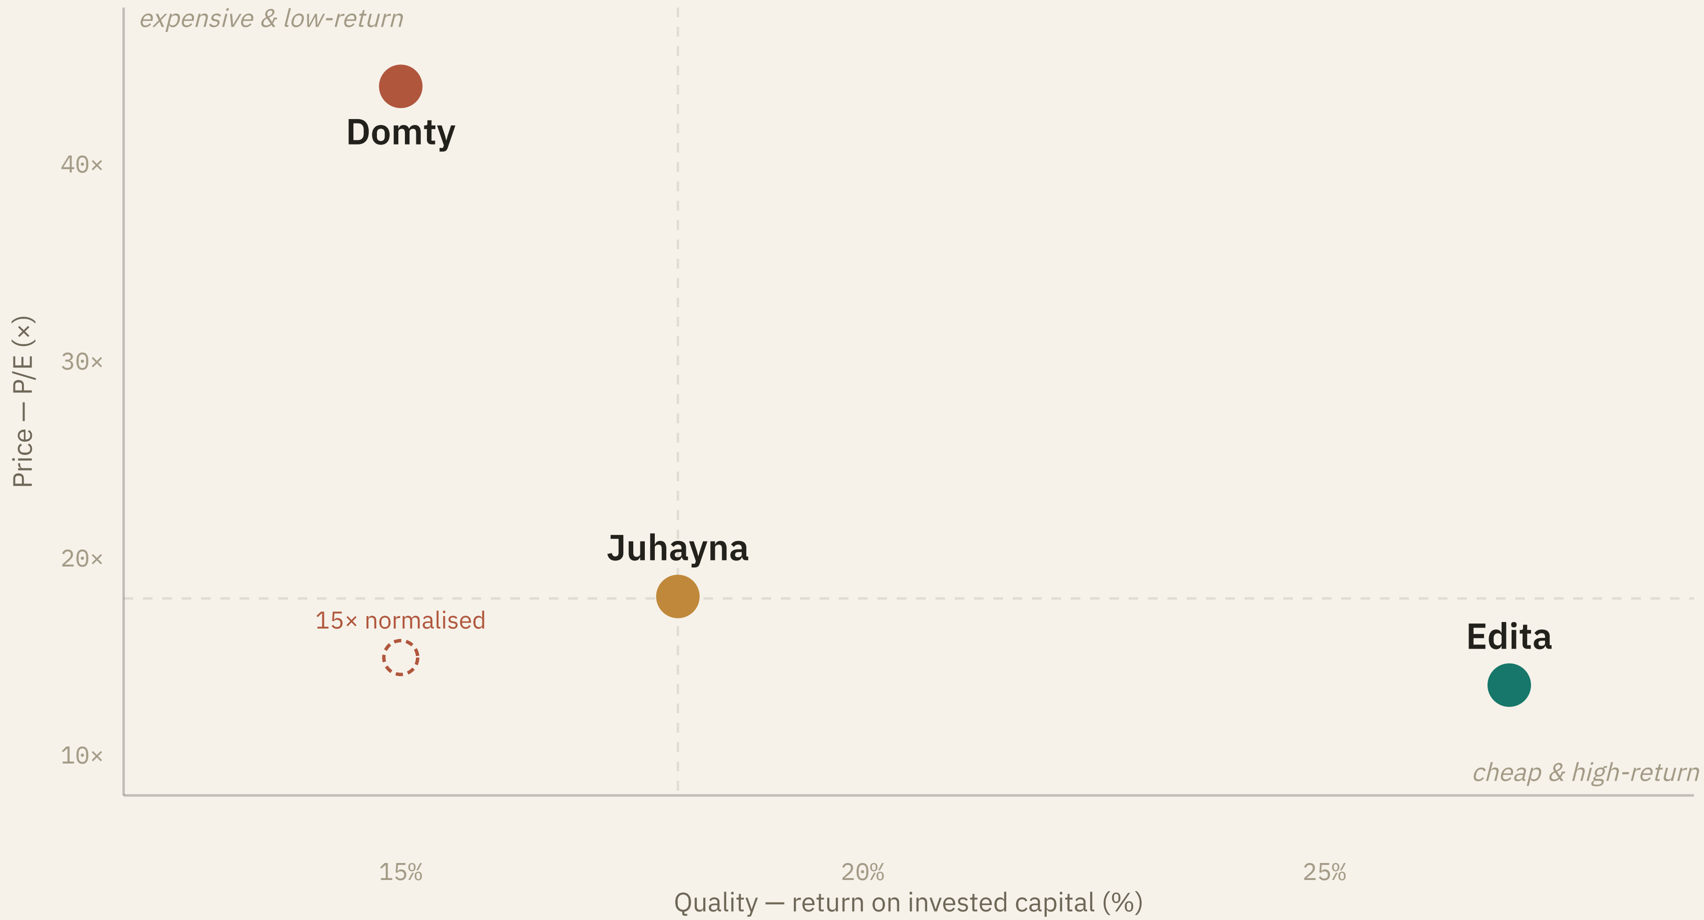
29 The multiples, side by side

30 Earnings yield vs the T-bill

EXHIBIT 27 · QUALITY VS PRICE

Paying the least for the best returns

Return on invested capital vs P/E · FY2025



13.6×

Edita P/E — the lowest price for the highest ROIC

44×

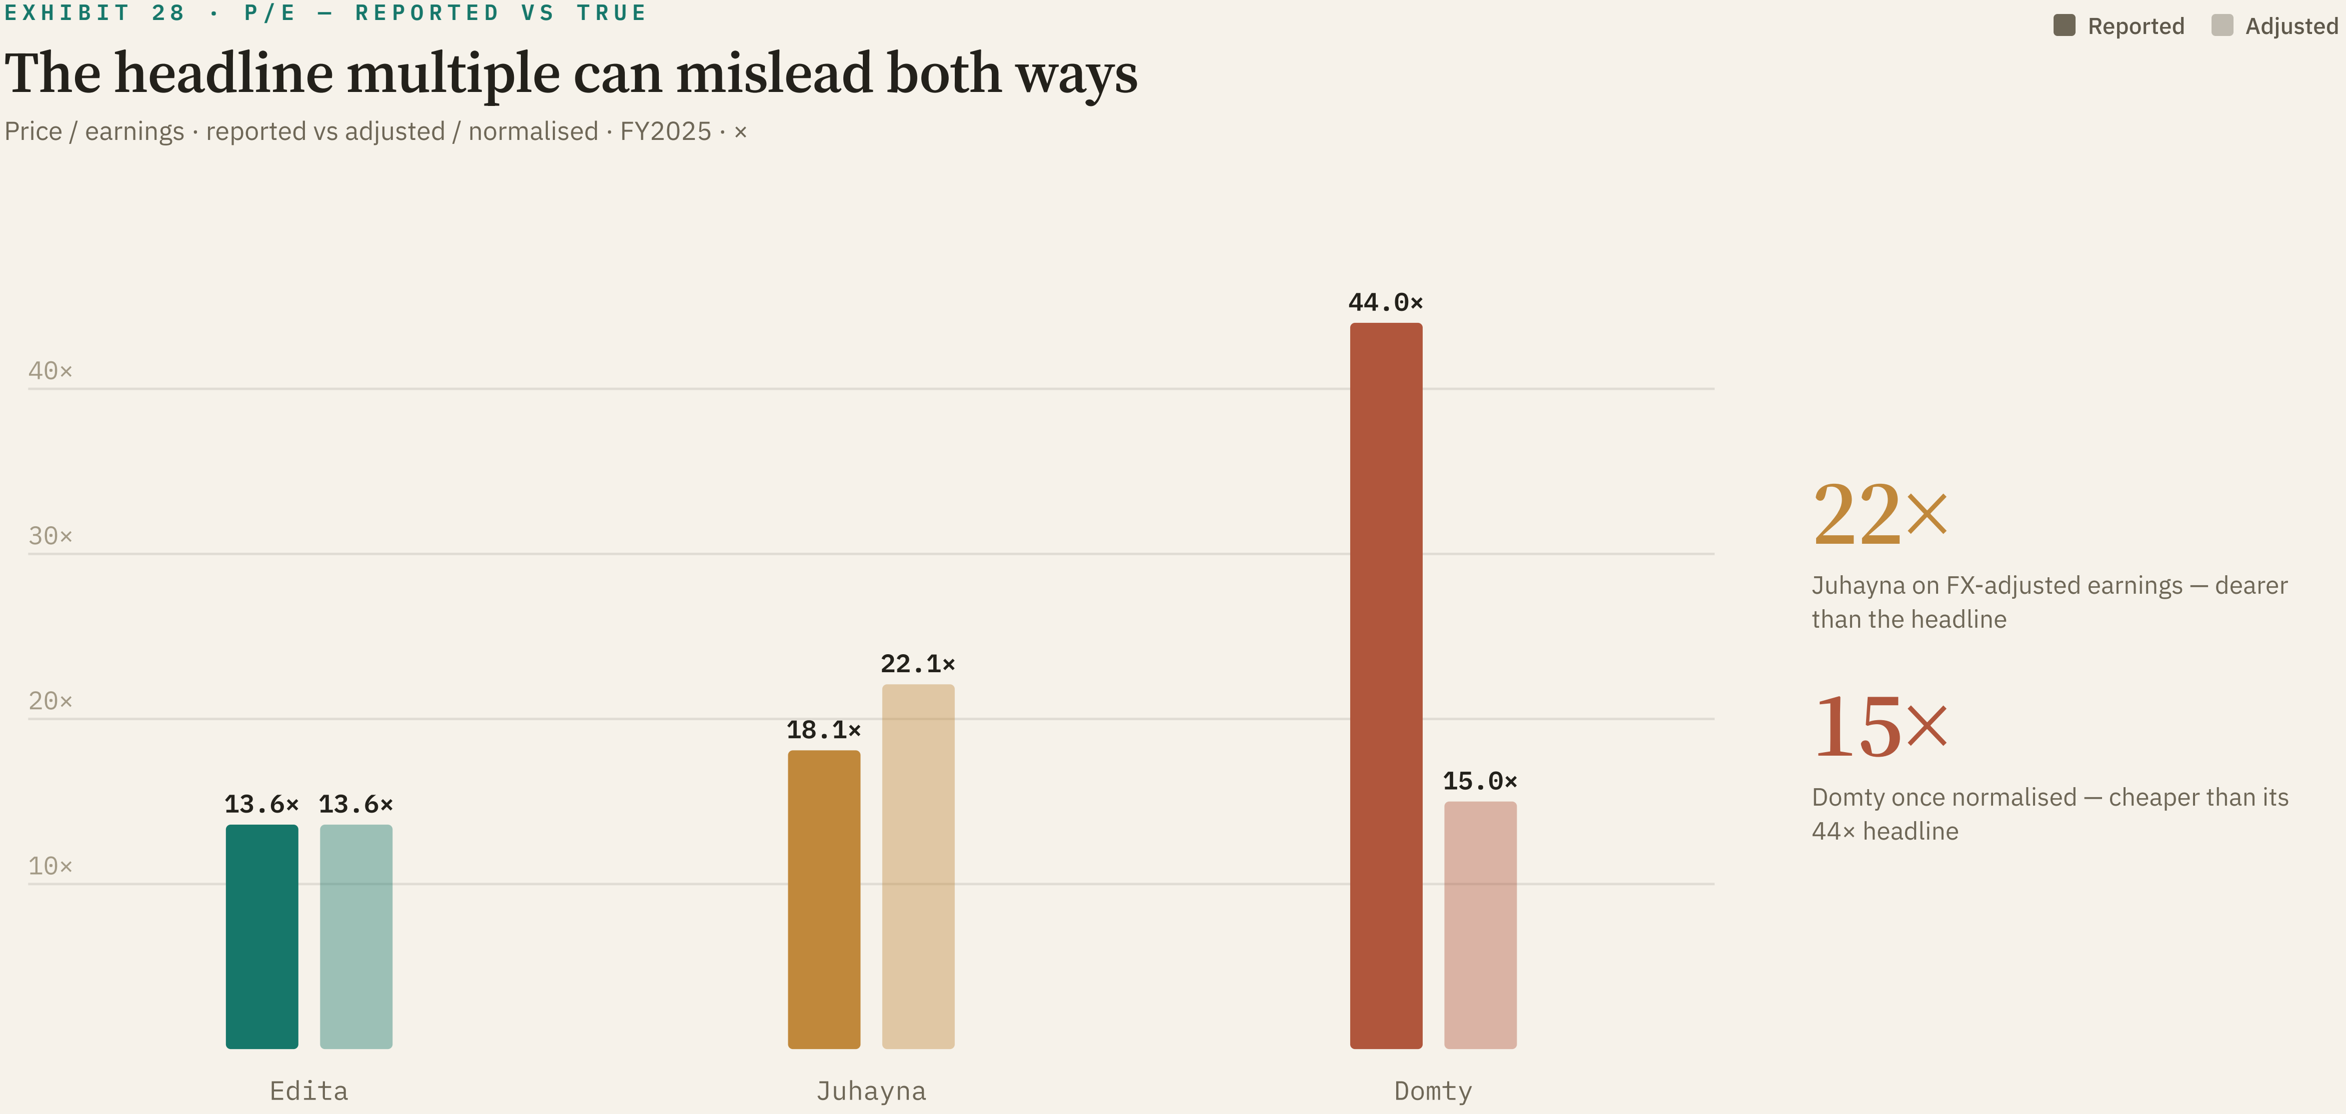
Domty reported P/E — ~15× only once earnings normalise

– Edita sits in the best quadrant — the highest return on capital at the lowest multiple; Domty sits in the worst, paying up for the weakest returns unless earnings normalise.

EXHIBIT 28 · P/E — REPORTED VS TRUE

The headline multiple can mislead both ways

Price / earnings · reported vs adjusted / normalised · FY2025 · ×



22×

Juhayna on FX-adjusted earnings — dearer than the headline

15×

Domty once normalised — cheaper than its 44× headline

— Edita's headline P/E is honest; Juhayna looks cheaper than it is once FX is adjusted; Domty looks dearer than it is, because reported earnings are depressed.

EXHIBIT 29 · THE MULTIPLES, SIDE BY SIDE

No single number settles it

Core valuation multiples · FY2025 · best in each row highlighted

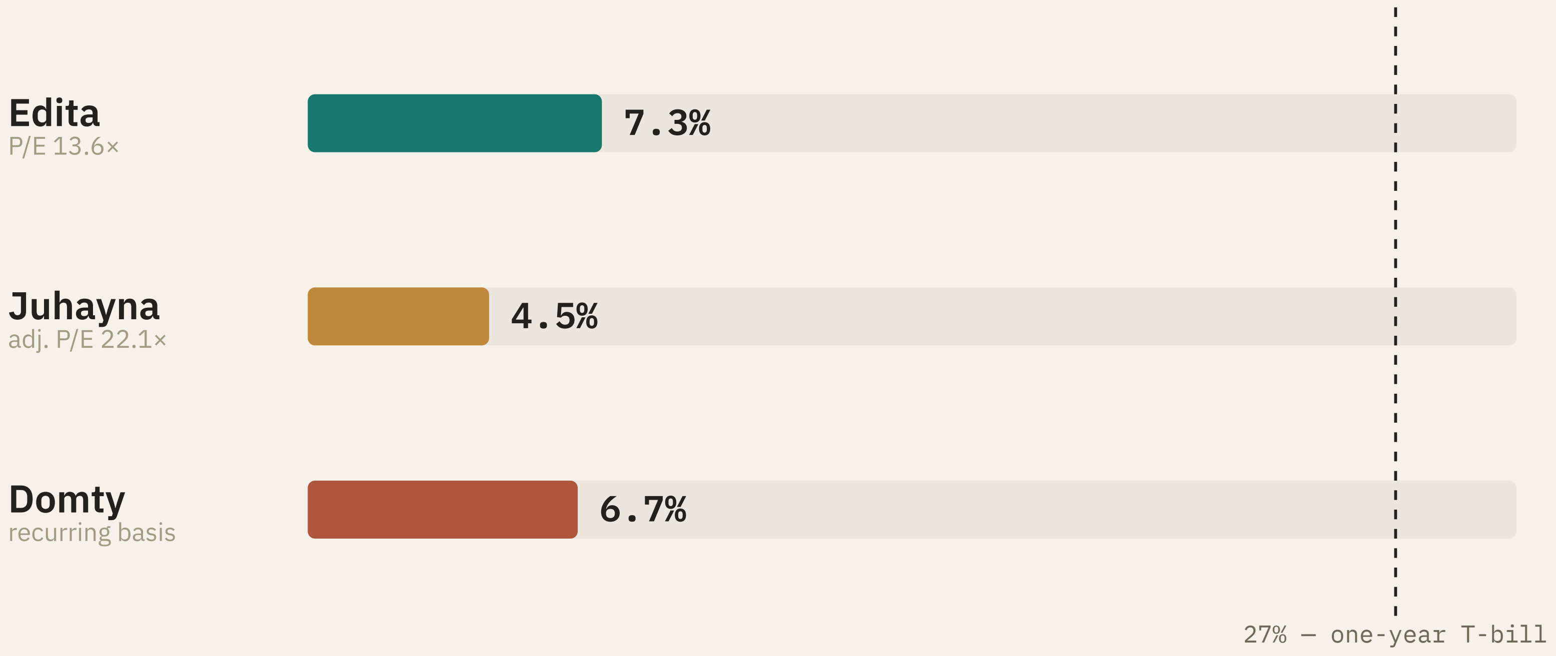
	EDITA	JUHAYNA	DOMTY
P/E — true basis lower is cheaper	**13.6×**	22.1×	15×
EV / EBITDA lower is cheaper	10.2×	**9.4×**	10.4×
Price / sales lower is cheaper	1.76×	1.15×	**0.75×**
Dividend yield higher is better	**6.8%**	4.5%	3.4%

– Edita is cheapest on true earnings and pays the best yield; Domty is cheapest on sales; Juhayna is most expensive once earnings are adjusted.

EXHIBIT 30 · EARNINGS YIELD VS THE T-BILL

None of them out-yields risk-free cash

Earnings yield vs one-year T-bill · FY2025 · %



7.3%

Edita's earnings yield — the highest, yet still below 27%

27%

the risk-free T-bill none of them clears on yield

– At a 27% risk-free T-bill, none of the three clears the hurdle on earnings yield — these are inflation and growth bets, not income substitutes for cash.

07

The verdict

Who controls profit, and who stays standing under stress.

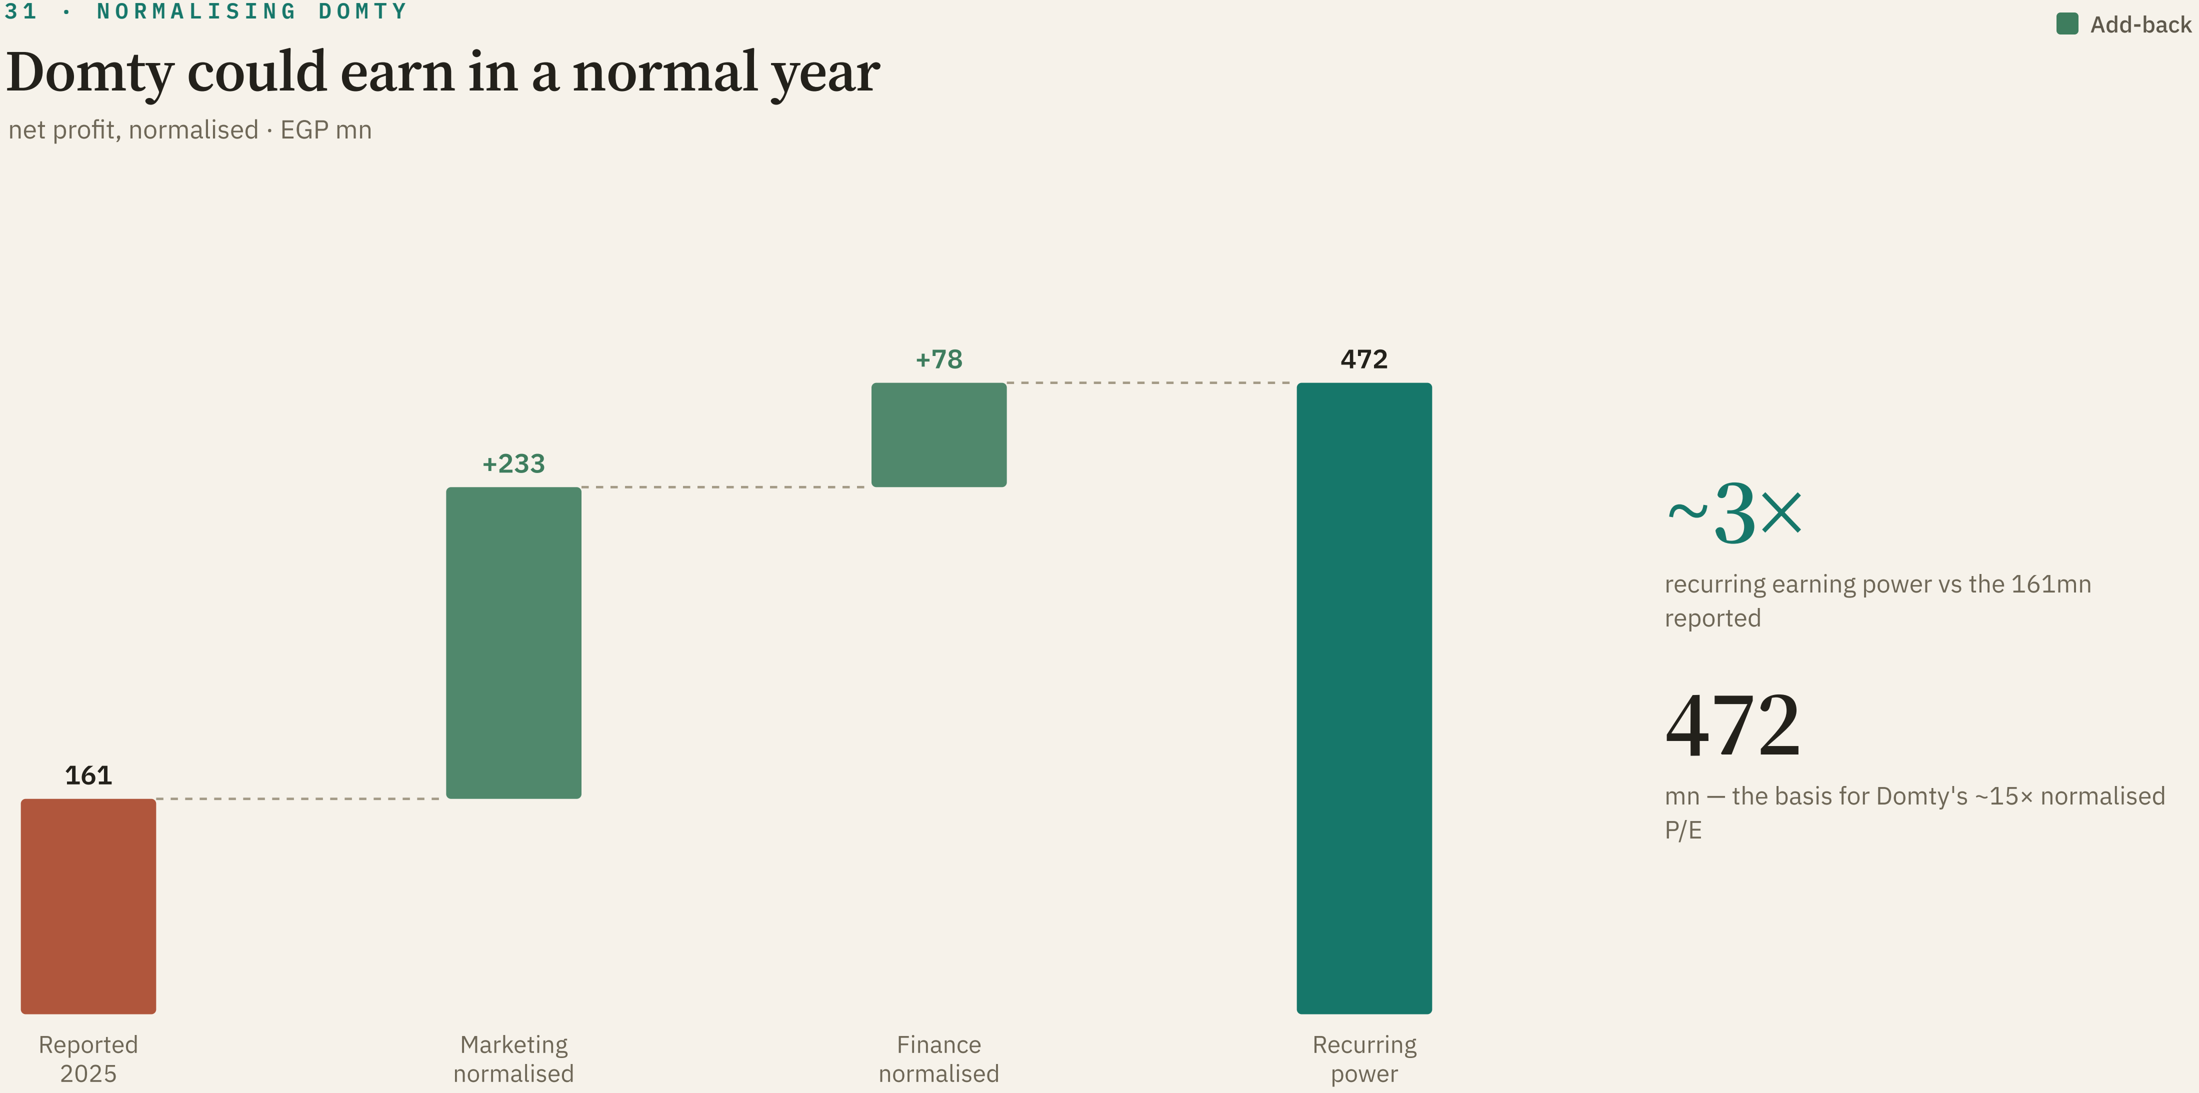
> *Three more lenses for what comes next — then the scorecard, the ranking, and how it was built.*

31 Normalising Domty's earnings
32 The Ramadan signature
33 The shape of 2026
– Scorecard, verdict & method

EXHIBIT 31 · NORMALISING DOMTY

What Domty could earn in a normal year

Domty 2025 net profit, normalised · EGP mn



~3×

recurring earning power vs the 161mn reported

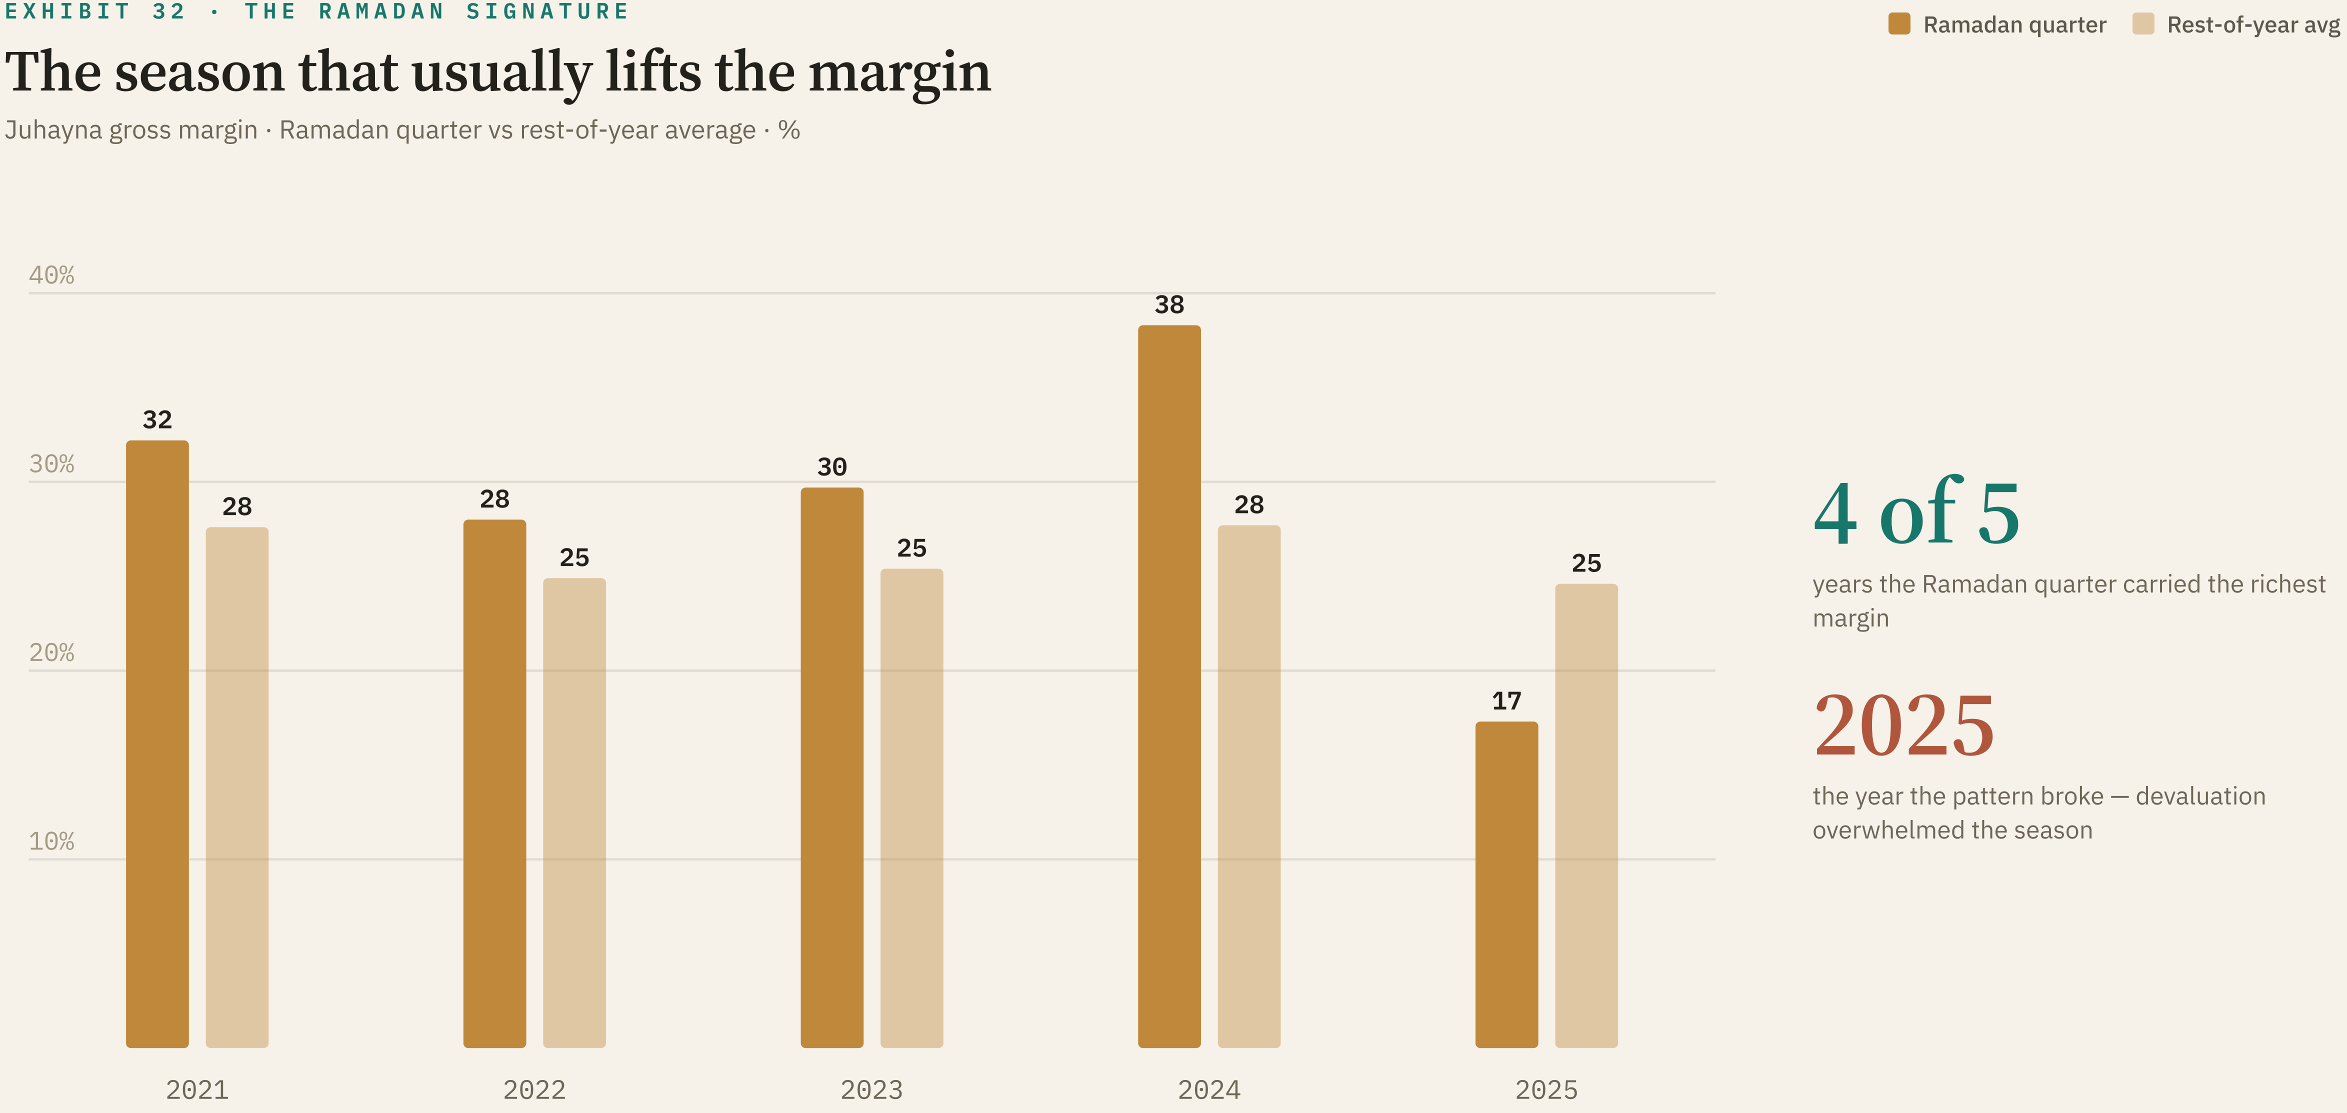
472

mn — the basis for Domty's ~15× normalised P/E

— Strip out the one-off marketing push and the rate-shock financing, and Domty's recurring earning power is roughly 472mn — about three times reported.

The season that usually lifts the margin

Juhayna gross margin · Ramadan quarter vs rest-of-year average · %



4 of 5

years the Ramadan quarter carried the richest margin

2025

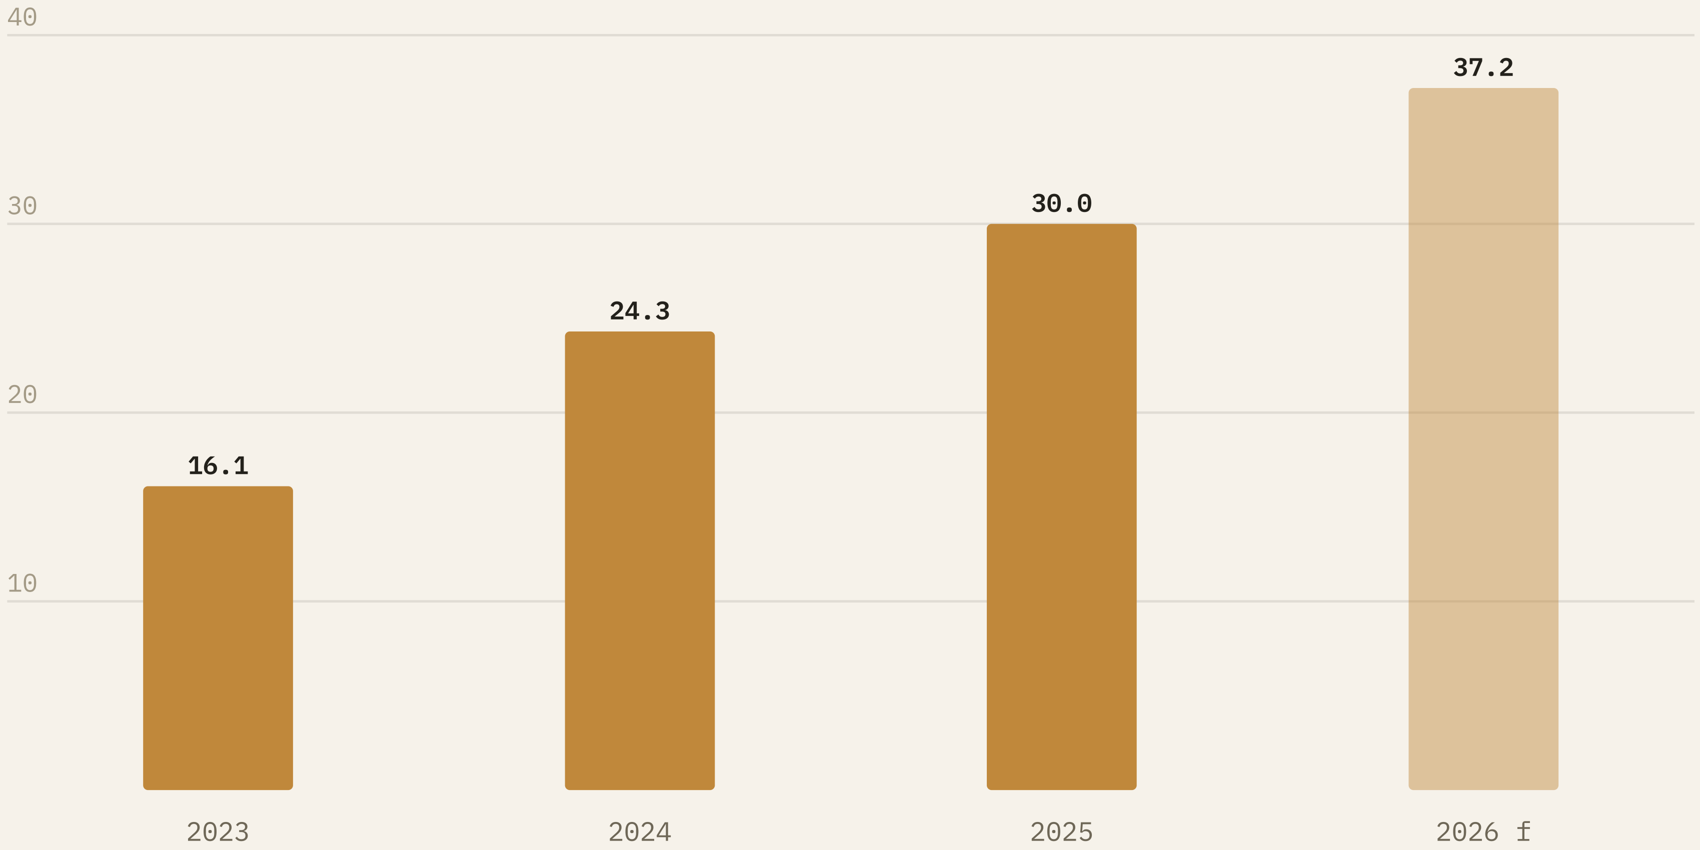
the year the pattern broke — devaluation overwhelmed the season

— In four of the past five years Juhayna's richest gross margin fell in the Ramadan quarter; only 2025 broke the pattern, when the devaluation overwhelmed the seasonal lift.

EXHIBIT 33 · THE SHAPE OF 2026

Growth is intact — the question is quality

Juhayna revenue · 2023–2025 actual + 2026 base-case forecast · EGP bn



37 bn

base-case 2026 revenue — about +24% on 2025

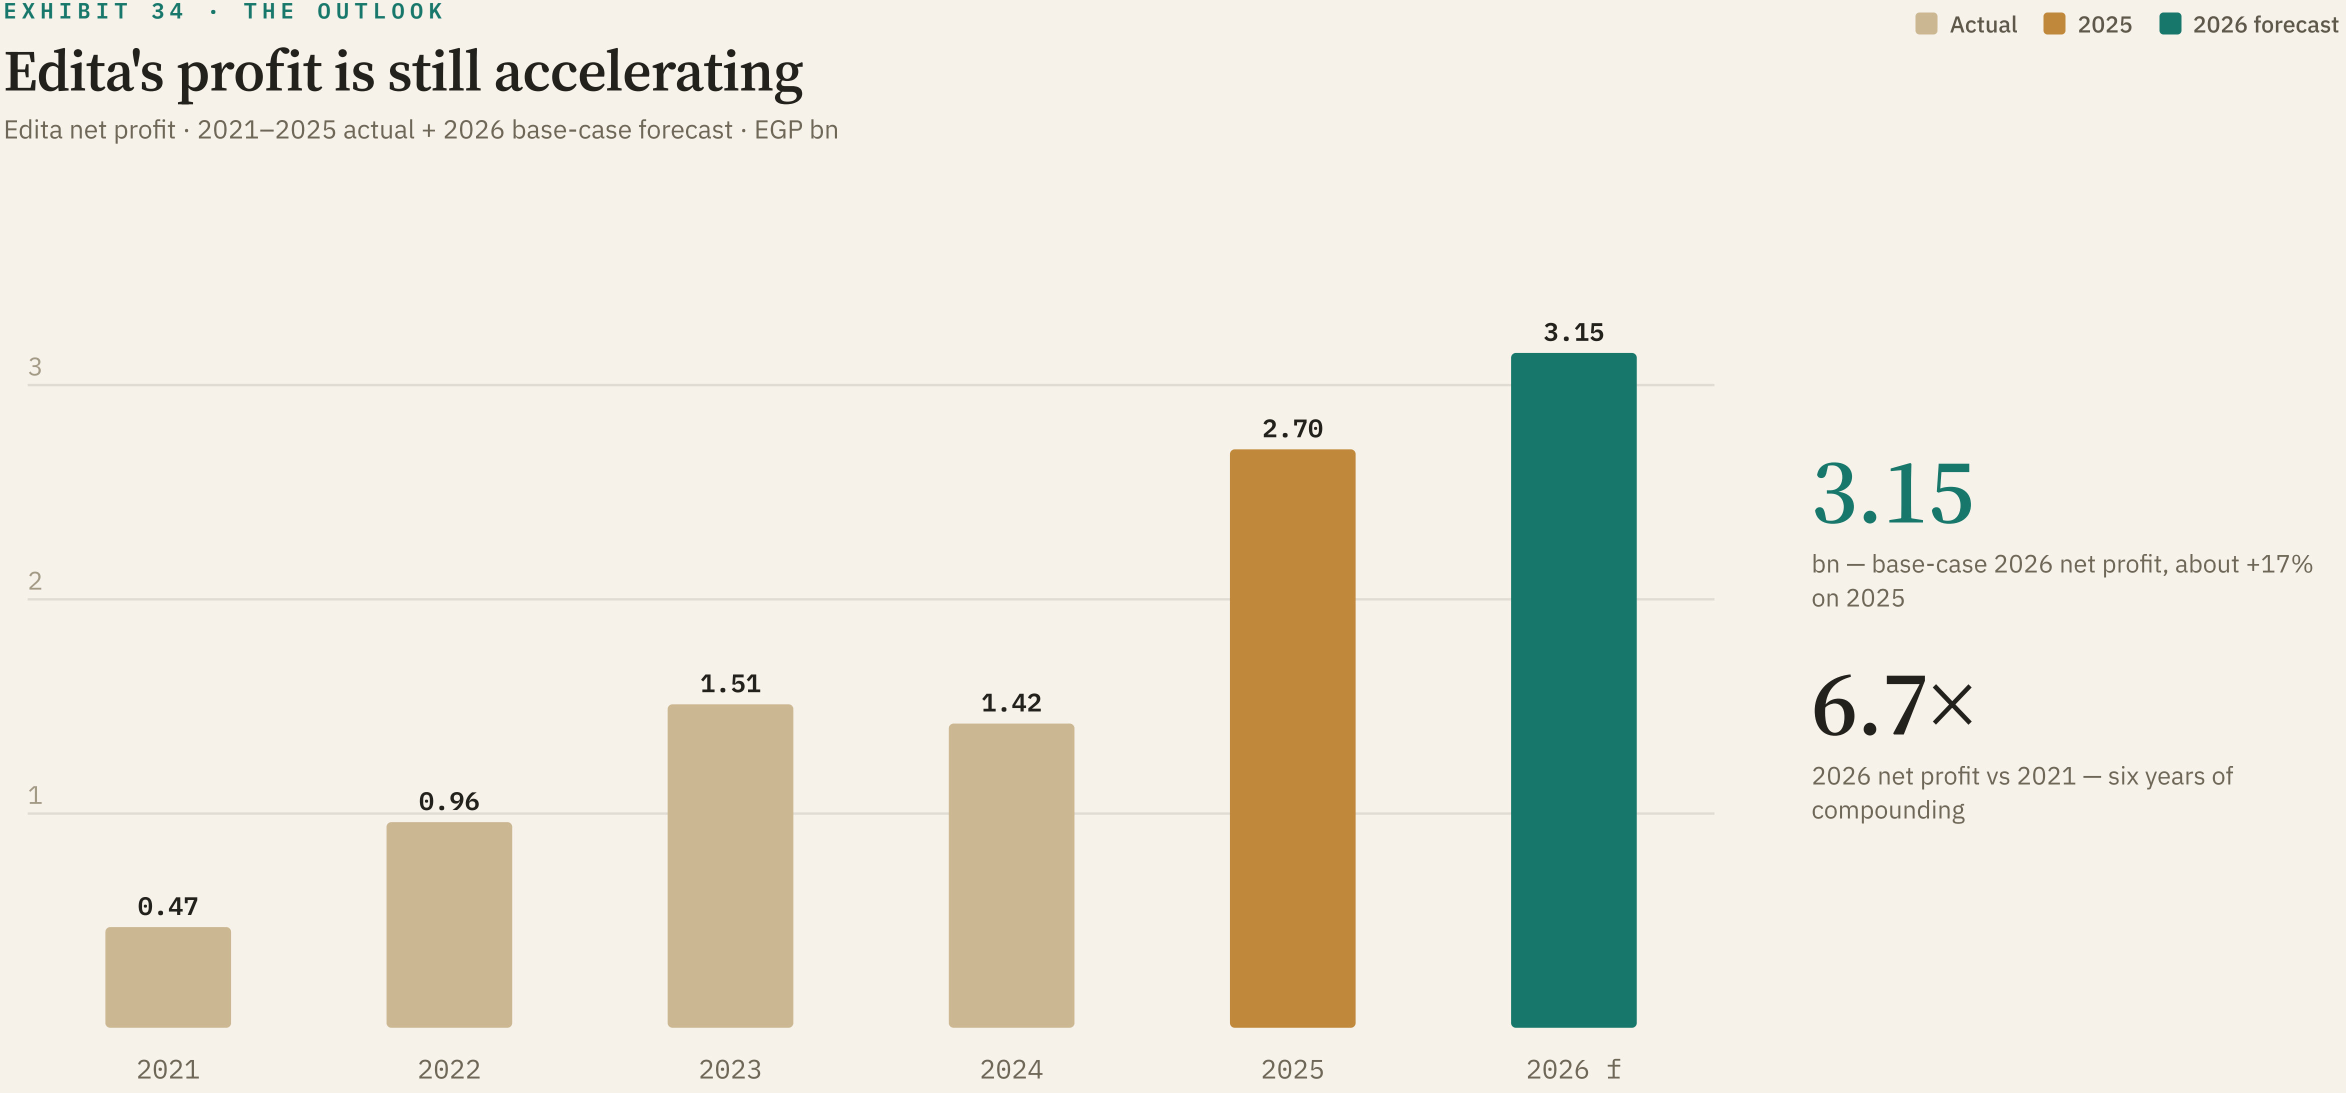
~24%

gross margin assumed to stabilise as the currency settles

— The base case has Juhayna's revenue reaching about 37bn in 2026, up roughly 24%, with gross margin stabilising near 24% — growth intact, but quality still to be proven.

Edita's profit is still accelerating

Edita net profit · 2021–2025 actual + 2026 base-case forecast · EGP bn



3.15

bn — base-case 2026 net profit, about +17% on 2025

6.7×

2026 net profit vs 2021 — six years of compounding

– After a single soft year in 2024, Edita's net profit jumped to 2.70bn in 2025 and is set near 3.15bn in 2026 — the only one of the three still compounding profit, not defending it.

THE SCORECARD

Ten tests, one consistent winner

FY2025 · best in each row shaded
Juhayna profit / PE on FX-adjusted basis

METRIC	EDITA	JUHAYNA	DOMTY
Revenue scale · EGP bn	20.9	30.0	9.4
Revenue growth	+29.5%	+23.4%	+1.8%
Gross margin	34.4%	22.9%	24.2%
Net margin	12.9%	6.4%	1.7%
Interest coverage	7.1×	3.1×	1.46×
Net debt / equity · lower	0.70×	1.16×	1.17×
ROIC	27%	18.4%	15.1%
FX resilience · 4yr, bn	+0.14	−1.17	0.00
P/E · true basis, cheaper	13.6×	22.1×	~15×
Price / sales · cheaper	1.76×	1.15×	0.75×
Tests won	8	1	1

THE VERDICT

One controls profit. The others trade quality for something else.

1

Edita — the controlled operator

E F I D

Smaller on sales, but it controls profit end to end: the widest margins, the lightest balance sheet, the highest returns on capital, balanced on the dollar — and still the cheapest on true earnings. The clear winner on quality and resilience.

2

Juhayna — the stretched giant

J U F O

Unmatched scale and a real growth runway — but a dollar-heavy cost base, a debt-funded build and the tightest liquidity make the profit thin and FX-exposed. A scale story that still has to prove its quality.

3

Domty — the pressured turnaround

D O M T

Smallest and under the most financing stress, with interest eating two-thirds of operating profit. Cheapest on sales, and ~3× its reported earning power if normalisation holds — an option on falling rates, not yet a verdict.

Under one macro storm, structure — not size — decided who kept their profit.

METHODOLOGY & SOURCES

How these numbers were built

DATA & BASIS

Built from each company's published financial statements for FY2021 through Q1 2026 — income statement, balance sheet and cash flow. Ratios are computed on both a standalone-quarter and a full-year basis, with revenue and profit in EGP unless stated.

ADJUSTMENTS

FX-adjusted profit puts the EAS 13 currency losses booked in equity (OCI) back through the income statement. Domty's earnings are normalised for one-off marketing spend and rate-shock financing. Operating margin is stated on an EBIT basis.

CAVEATS

Juhayna's segment mix is FY2023, the latest published breakdown. Market multiples are as of the analysis date. Forecasts are base-case scenarios, not management guidance. Figures are rounded; small differences may not foot exactly.

! **Disclaimer —** this analysis is for information and educational purposes only and is **not investment advice**, nor an offer or recommendation to buy, sell or hold any security. It reflects the author's independent reading of publicly available data, may contain errors, and relies on estimates and base-case forecasts that are not guaranteed of future results. Do your own research and consult a licensed financial advisor before investing.
